ILLUSTRATED CATALOGUE OF CHOICE SEEDS

WILLIAM EVANS

MONTREAL.

FS012
1889
E72

NOTICE.

The vitality of the greater portion of the seeds mentioned in this Catalogue have been thoroughly tested in my nursery and the percentage of each variety, that will vegetate carefully ascertained. No seed will be offered that I do not believe to be perfectly good. My greenhouses and grounds afford facilities that are unsurpassed for experimenting with and testing vegetables and flowers and those best suited to our climate, only, will be recommended, any new varieties that may be introduced and that are really desirable will be produced and offered to my customers.

SEEDS BY MAIL.

Flower and Vegetable Seeds in small papers postpaid to all parts of Canada and the United States at the prices quoted in this catalogue.

Parcels of Seeds not over four lbs. weight can be forwarded to any Post Office in the Dominion or the United States, at four cents per pound. Where large Parcels are required, they can be forwarded by freight or express to any station, without disappointment or loss.

As I do not place Seeds on commission in the hands of dealers, parties at a distance desirous of trying those offered by me are invited to send their orders direct to the House, or to the nearest store keeper who sells my seeds. Ask for Wm. Evans' seeds and take no others.

ATTENTION TO CUSTOMERS.

It is the earnest wish of the proprietor that all the requirements and directions of his customers be scrupulously attended to, and the greatest care will be taken to carry out their instructions faithfully. If at any time, there is cause given for dissatisfaction, it will be rectified at the earliest possible moment, on his attention being called to it.

HINTS TO CUSTOMERS ORDERING GOODS.

Please write your name and address in full, also nearest Railway Station or Shipping Port to where the goods are to be forwarded, and whether by freight or express. Send in your orders as early as possible in the Spring. The favor of your kind recommendation of the house to those of your friends requiring Seeds for the Garden, or Farm, Fruit or Ornamental Trees, Plants or Flowers for Greenhouse or grounds, is respectfully requested.

Any one to whom this catalogue may be addressed and who does not require it, will oblige the sender by handing it to some neighbor who may want to order Seeds.

Fresh Importation of Black Sea Wheat.

At the particular request of a few of my Customers I am this season importing a small quantity of

RED BEARDED SPRING SEED WHEAT.

The sample sent me and upon which this Wheat has been ordered, is a very fine one. It is the Genuine Black Sea Wheat, and comes from one of the best Wheat growing districts in the North of Russia. I can recommend it with confidence to farmers who may wish to change their seed. As the expense of procuring and bringing out this Wheat in small quantities is very great, the price must necessarily be high and is as follows, viz: per pound by mail prepaid 20c. per peck \$1.75, per half bushel \$3.25, per bushel \$6.00 including package.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

MONTREAL, JANUARY 1889.

I have now the pleasure to present my Thirty-fourth annual Descriptive Catalogue of Farm, Garden and Flower Seeds.

Having my warehouses centrally situated and of easy access, with every facility for supplying seeds, with large premises and extensive and complete stocks in each department, purchasers may rely upon having their orders filled with the greatest care and despatch by reliable and experienced hands.

The Seeds now offered are, I believe, of the best quality and I can confidently recommend them to my customers as being true and reliable. *Yet, while I exercise the greatest care in this matter, all seeds bought from me must be on the conditions that I give no warranty expressed or implied as to description, quality, growth, productiveness or any other matter of any seeds I sell, nor will I hold myself in any way responsible for the crop. All seeds bought from me must be accepted on these terms or returned.*

Having now had more than thirty years experience in the Seed Trade in this city, and being myself extensively engaged in the cultivation of vegetables and flowers, I have every facility for acquiring a practical knowledge of the varieties best suited to our soil and climate, and the opportunity of daily testing the purity and germinating qualities of the Seeds offered. *These are special advantages of very great importance*, which I hope will be fully appreciated by my friends and the public.

Customers for Seeds who may be desirous of procuring *Fruit or Ornamental Trees, Flowering Shrubs, Roses* or any kind of *Nursery Stock, Greenhouse or Vegetable Plants, etc.*, will find it a great convenience to have their orders completed at the same establishment. My nurseries are within two miles of the City and of easy access to those who may be desirous of selecting their own stocks. To parties living in the City and vicinity, the advantage of having these nurseries in their immediate neighbourhood cannot be over estimated, as the shorter the distance the plants have to be moved the less danger there is of their being injured by removal.

All orders from unknown correspondents must be accompanied by the cash.

Thanking you for your past kind patronage and soliciting the favor of your future commands, which shall have prompt and careful attention.

I remain,

Yours respectfully,

WM. EVANS.

REMARKS ON THE CULTIVATION OF VEGETABLES.

—:O:—

In making out the Vegetable Seed List, which will be found very complete, I have appended a few brief directions having reference to the time of sowing and general cultivation of the different varieties.

What is essential to the production of fine Vegetables is the proper tillage of the ground. Nothing can supersede the advantages accruing from deep culture. Where the spade is used, the ground should be dug from twelve to sixteen inches deep, and a liberal supply of well rotted manure mixed with the soil; the expense will be amply repaid by the increased production. Good drainage is also of the greatest importance, and is, in fact, the first thing to be attended to. As a general rule, it is best to sow and cultivate all crops in drills in preference to broadcast; the crop is tilled at less expense, for as soon as the seedling plant shows itself, the hoe can be applied between the rows and kept constantly at work during the growing season, for the purpose of eradicating the weeds and keeping the ground loose and porous.

Never work the ground when wet and heavy, as it renders it compact and lumpy during the whole season. By stirring the soil often during dry weather it will be better prepared to receive and retain moisture from the atmosphere.

The early maturity of many vegetables is of great importance to the cultivator; and for the promotion of this object it is necessary to start them in hot-beds very early in the spring; the trouble is not very great and much time is saved.

DIRECTIONS for the MAKING and MANAGEMENT of HOT-BEDS.

A warm position should be selected, fully exposed to the sun, facing the east or south, and sheltered by a fence or hedge on the west and north. The soil should, if possible, be light and dry, as in this case the bed can be sunk a foot or more in the ground; but if damp or cold it should be built on the surface.

Making the Beds.—A quantity of stable manure should be collected and thrown together in a heap, early in March. After remaining a few days it should be taken up and turned over, and after an interval of three or four days, repeat the same process. Let the manure remain three or four days in a heap, and then form the bed of any size that may be requisite, making it about a foot wider than the frame, all round. The bed should be not less than two and a half feet high, and made rather firm. Water if the manure be dry. The frame may be made any size, but the most convenient is eight feet by five, which will take two lights, four feet by five. Place about eight inches of light rich soil in the frame, after it is placed on the bed, so that the surface of the soil may be from six to eight inches from the top of the frame. After the bed has stood with lights on, but raised a few inches to let the steam escape for a few days, the seed may be sown; and when the young plants make their appearance above the ground, give some air, day and night, in moderate weather, by raising the lights two or three inches; as the heat of the bed diminishes, increase the supply of air, to prevent the plants being drawn up. In severe weather the frame and lights should be covered at night, with mats or straw, in high wind protect the side of the bed in the same way, or the current of air may extinguish the heat. As the plants increase in size, the supply of water may be augmented.

The frame should be nine to twelve inches deep at the front, and fifteen to eighteen inches at the back. This will give a slope to carry off the rain.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

NOVELTIES IN VEGETABLE SEEDS.

- Celery, Paris Golden Yellow, Large Solid, new,** a distinct type, of fine flavor and a good keeper, when blanched, of a golden tint. A very desirable kind. .p. pkt. 10c., p. oz. 1.00, p. 2 oz. 1 50
- Cucumber, Long White Spine, Improved, Montreal grown Seed,** superior to any other kind .p. pkt. 1c., p. oz. 15c., p. 2 oz. 25c., p. $\frac{1}{2}$ lb. 40c., p. 1 lb. 1 50
- Cucumber, Carter's Model.** { Prize English varieties. The finest
" **Telegraph.** in cultivation, of beautiful form, } p. pkt. 0 50
" **Slon House,** fruit from 12 to 20 inches long.
" **Lord Kenyon's favorite,**
" **Sooly Qua, Giant Chinese,** fruit is 6 to 6 feet long, dark glossy foliage, handsome flowers. .p. pkt. 0 25
- Lettuce, Montreal Market Gardeners,** a fine large, solid heading variety, superior in quality to most other sorts. .p. pkt. 5c., p. oz. 0 25
- Lettuce, Defiance Summer,** large growing, long standing sort. Light green color, very crisp and tender. .p. pkt. 5c., p. oz. 0 15
- Lettuce, St. Louis,** heads large, crisp and tender, good for forcing or the open ground, find new kind. p. pkt. 5c., p. oz. 0 25
- Melon, Evans' Superb Montreal,** stands at the head of all other varieties, large size flesh light green, rich sweet and melting. .p. pkt. 15c., p. oz. 50c., p. 2 oz. 75c., p. $\frac{1}{2}$ lb. 1 25
- Onion Tripoli White Flat Mammoth,** is the largest of the Tripoli sorts, diameter of the bulbs being 6 $\frac{1}{2}$ to 7 inches, they are flat in form, silvery white skin, of a mild and fine flavor, unsurpassed for exhibition purposes. .p. pkt. 0 25
- Ornamental Gourds,** superb collection of giant, medium sized and miniature ornamental Gourds. each mixed pkt. 0 25
- Parsley, Beauty of the Parterre,** this is the most beautiful Parsley extant and differs materially from all other kinds. Charming for garnishing purposes, as well as for edgings, a space of 8 to 10 inches should be allowed for the plants to fully develop. .p. pkt. 10c., p. oz. 0 25
- Radish, Scarlet Globe,** of globular shape and brilliant red color, very short top, flesh tender and crisp. .p. pkt. 0 10
- Radish, White Olive shaped, new,** very early, for delicacy of flavor preferable to the white summer turnip sort .p. pkt. 5c., p. oz. 10c., p. $\frac{1}{2}$ lb. 0 25
- Squash, Evans' Mammoth,** selected from the finest specimens grown in Montreal, each weighing over 150 lbs. .p. pkt. 20c., p. oz. 40c., p. 2 oz. 75c., p. $\frac{1}{2}$ lb. \$1.25, p. 1 lb. 4 00
- Tomato Alpha,** a new variety, said to be earlier than any other variety, smoother and heavier than any Tomato, that approaches it in earliness and equal to the very best late varieties. Seed ripened within 100 days after sowing .p. pkt. 40c., p. oz. 1 00
- Tomato Advance,** this new variety is a cross between the Alpha and Livingston's Perfection, it begins to ripen 90 days from time of sowing the seed, it is absolutely smooth, medium size, very productive, growing in clusters from 4 to 9, bright red color, very solid, does not rot and scarcely a fruit sets that does not mature .p. pkt. 0 25
- Tomato Lorillard, new.** The Society of American Florists have awarded a certificate of merit to this Tomato, which they say: possesses *extra good forcing qualities, uniformity of ripening over the entire surface,* of fine flavor, very solid and beautiful smooth appearance, the Committee believe this to be the best Tomato for forcing under glass that has yet made its appearance. p. pkt. 0 25
- Turnip Swede Carters Imperial Selected Stock,** finest variety of old Swede, more oval and highly colored than any other kind, gave perfect satisfaction last year, recommended with great confidence. .p. pkt. 5c., p. oz. 15c., p. 1 lb. 0 50
- Vegetable Marrow, Muir's Hybrid Prolific,** very distinct in shape, being but little more in length than girth, almost equal in thickness at both ends, color beautiful cream, splendid flavor, when fully grown, measures about 14 by 12 inches. .p. pkt. 0 10
- Vegetable Marrow, Pen-y-Byd,** (best in the world) perfectly round in form and of excellent flavor .p. pkt. 0 25

Vegetable Plants, Annual and Greenhouse Plants.

For the convenience of my customers who may not have facilities for making hot-beds, I grow large quantities of the different kinds of vegetable and flower plants, the seeds of which, require to be started in hot-beds to promote their early maturity. And during the season I shall be prepared to furnish any quantities that may be required of the different varieties, carefully grown at my own nurseries. Purchasers may rely upon their being of the best quality and true to name, these plants will be supplied at the lowest prices. Those of the vegetables are quoted under their respective headings in this Catalogue. Annual flower plants are furnished at \$2.00 per 100. The prices of greenhouse and other plants are given in my Nursery List, copies of which may be had on application.

To parties requiring large quantities special prices will be given.

I offer the following inducements to parties who wish to purchase packets in quantity. Seeds ordered in this way will be forwarded by Mail, prepaid, to any address in Canada or the United States.

Mixed Flower Seeds.

For several years past, I have put up a number of packages of Mixed Flower Seeds. These packets will be an acquisition to any one wishing to cultivate a variety of flowers with very little trouble. The seeds are fresh and genuine and have given satisfaction to all those who have tried them.

Price, 20cts. per packet.

I ALSO OFFER CHOICE COLLECTIONS OF
AQUATICS, Seeds that grow in water.

SUITABLE FOR

AQUARIUMS, TANKS, FOUNTAINS
BASINS, &c., &c.

PRICE: - - - - - \$1.00 each.

FARM AND GARDEN SEED.

ARTICHOKE.

Large Green Laon or Paris, best..... per pkt. 10c., per oz. 0 50

Culture—Sow early in spring, in seed beds in drills one foot apart, and when well up, thin to six inches in the drill. Transplant the following spring to a permanent place, and set in rows four feet apart and two feet apart in the rows. Keep free from weeds, and the earth loose between the plants. Before winter sets in, the plants should be covered with straw or stable litter.

ASPARAGUS.

Conover's Colesal, very fine variety..p. pkt. 5c., p. oz. 10c., p. $\frac{1}{4}$ lb. 25c., p. lb. 0 75

Grayson's Giant, finest..... " 5c., " 10c., " 25c., " 0 75

The above are choice varieties, perfection, however, will depend upon the soil and cultivation.

Plants furnished at \$1.50 per 100.

Culture—The seed may be sown in spring, as soon as the soil is in good working order. The seed bed should be thoroughly spaded over the surface, levelled and raked smooth and fine, and the seed sown in drills twelve or fourteen inches apart and about an inch in depth. An ounce of seed is sufficient for forty or sixty feet of drill. When the plants are well up, thin to three inches apart. Cultivate in the usual manner during the summer; and give the plants a light covering of stable litter during the winter. When the plants are two years old transplant into beds prepared in the following manner: trench the ground thoroughly to the depth of two and a half or three feet, in order to make it rich a large quantity of manure should be incorporated as well at the bottom or near the surface, using either the scourings of ditches made into compost, decayed leaves or leaf mould, or the remains of hot beds. Plant in rows two feet apart and one foot apart in the rows. Before winter sets in, cover the beds with six inches of manure, and in spring give a top-dressing of salt.

BEANS, ENGLISH.

CHOICE IMPORTED VARIETIES.

Broad Windsor, very fine, best for general use..... p. lb. 20c., p. peck 2 00

Johnson's Wonderful, an excellent variety. " 20c., " 2 00

Early Mazagan, very hardy, bears well..... " 15c., " 2 00

Culture—English beans are very hardy and should be planted as soon as possible after the ground is open. Plant in drills two and a half feet apart and three inches in the drills. When in pod, break off the top of the plant to check the growth. Cultivate the same as dwarf beans. Strong soil is best for them.

BEANS, DWARF OR BUSH.

Early Yellow China, very much like the Early China..... p. lb. 15c., per peck 1 50

" **China**, general favorite..... " 15c., " 1 50

" **Yellow Six Weeks**, very productive..... " 15c., " 1 50

" **Newington Wonder**, pods very crisp and tender. " 15c., " 1 50

" **Valentine**, red, good bearer, excellent flavor..... " 15c., " 1 50

" **Dun Colored**, one of the earliest " 15c., " 1 50

" **Long Yellow Six Weeks**, very early and productive.... " 15c., " 1 50

" **Mohawk**, hardy variety of good quality..... " 15c., " 1 50

Bonnemain, this variety introduced lately by Mr. Bonnemain, is earlier and more productive than any other kind in cultivation. These beans are white, of an oblong shape, it is also the most esteemed variety for table use either in a green or mature state..... p. pkt. 5c., p. lb. 20c., p. qt. 0 40

WILLIAM EVANS' ILLUSTRATED CATALOGUE

BEANS, DWARF OR BUSH.—Continued.

Extra Early Etampes , this is another new bean, obtained like the preceding through Mr. Bonnemain, it resembles the white Flageolet but is much superior to it in earliness, productiveness and fine quality.....	per lb.	0 20
Emile , extremely dwarf habit, pods long and large, green before maturity, never becoming white or yellow, very tender and delicious. One of the finest sorts.....	"	0 20
Wonder of France , long straight pods, early and productive. The leaves dropping before the maturity of the pods, the latter ripen quickly, the grain remains of a beautiful green color and maintains that color quite fresh even when cooked.....	"	0 25
Improved Round Pod Red Valentine , is more productive, grows a stronger and more thrifty vine, and yields larger and better filled pods than does any other strain of this variety.....	"	0 15
Non Plus Ultra , a new, very dwarf variety of dark yellow color. Earlier, more productive and of finer quality than the early yellow six weeks which it somewhat resembles	"	0 15
Ivory Pod Wax . Pods long, almost of a transparent waxy white, perfectly stringless and exceeding in tenderness nearly all other sorts, of medium size, white and oval when ripe, excellent as a shelled bean for winter use	p. lb. 15c., p. peck	2 00
Golden Wax , very prolific, pods larger than the common kinds, quite stringless.....	" 15c., "	2 00
White Wax or Butter , similar to the well known Black Butter, pure white, very fine sort.....	" 15c., "	2 00
Butter Black , the pods when ripe are of a transparent yellow color very tender and delicious, one of the finest sorts.....	" 15c., "	2 00
Refugee or a thousand to one , very productive.....	" 15c., "	1 50
Golden Refugee , pods perfectly round, light green color, very productive	" 15c., "	1 50
Green Flageolet , seeds greenish white, good either as a string or shell bean.....	" 20c., "	2 25
Large Red Kidney , excellent as a shell bean, green or ripe.....	" 15c., "	1 50
Crystal White Wax , distinct variety, with transparent waxy pods tender, of the richest flavor and stringless.....	per lb. 20c., per qt. 40c., "	2 00
Turtle Soup Black , the young pods are of excellent quality, the seed when ripe is used in the preparation of turtle soup.....	" 15c., " 30c., "	1 50
White Marrow , good for field culture.....	per lb.	0 10
" Pea , extensively grown for sale in a dry state.....	"	0 10
" Kidney , excellent as a shell bean.....	"	0 10

Culture.—Plants of this class vary from one to two feet in height; they are grown in hills or drills, as may suit the convenience of the cultivator. All varieties are comparatively tender and should not be planted before settled weather. They succeed best in warm, light soil, but will flourish in any soil or situation, except such are shaded or very wet. Plant in drills about two inches deep and from three to six inches apart. The drills to be from fourteen to twenty inches apart, the distance being regulated by the habit of the variety cultivated. If planted in hills, they should be three feet apart in one direction and two in the opposite. The number allowed to a hill depends upon the size and vigor of the plants. Hoe often, keep the ground mellow, and draw the earth up to the plants.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

BEANS. POLE OR RUNNING.

Lima Extra Early , smaller and hardier than the large Lima...per lb.	25c.,	per peck	3 00

VARIETIES FOR FIELD CULTURE.

Green Top Sugar , grows to a large size, and is used for stock feeding.....	in 10 lbs. lot	30c.	per lb.	0 35
White Red Top Sugar , a fine variety for field culture.....	" "	30c.,	"	0 35
" Improved Imperial French Sugar , extra fine and productive, grown extensively in France and Germany for making sugar.....	" "	30c.,	"	0 35
Vilmorin's Improved White Sugar , extra fine quality....	per ½ lb.	20c.,	"	0 75

Culture.—The soil best adapted for the Beet is a deep light, well-enriched sandy loam. Sow the seed as soon as the frost is out of the ground or as soon as the soil can be worked, in drills 16 inches apart, and thin out to five or six inches. keep the plants free from weeds, and the earth between the rows loose and open, by frequent hoeings. One ounce of seed will sow about one hundred feet of drill.

Beet or Swiss Chard , Large Ribbed White Silver.....	per pkt.	5c.,	per oz.	0 10
" " " " " Scarlet Chilian.....	"	5c.,	"	0 10

Cultivated solely for its leaves. The midrib is used as asparagus, the other portions of the leaves as spinach. If cut often, new and more tender leaves will be produced.

Culture.—Swiss Chard or Leaf Beet. Sow in spring as soon as the soil is ready, in drills eighteen inches apart, and an inch and a half deep. When the plants are a few inches deep, thin out to nine inches or a foot apart, according to the richness of the soil. Keep the ground clean and loose, but weed the plants and water when required.

Island Gem , an early variety between the Fottler and Winningsstadt, partaking of the quality of both varieties, the Fottler for size and the Winningsstadt for solidity; heads round, large and solid, some of them, weighing 18 lbs.....	per pkt. 5c., per oz. 35c., 2 oz. 60c., $\frac{1}{4}$ lb.	1 00

Plants supplied at 50c. per 100.

Culture.—For early use, sow in hot-beds from February to April, and for winter use, the seed may be sown in a nursery bed in the open ground about the end of April or early in May. When five or six inches high transplant into well-manured ground, early varieties in rows two feet apart and from fifteen to twenty inches in the row, and the late varieties from two and a half to three feet apart each way. Hoe often, and draw up the earth around the plants. In the hot-bed or nursery-bed the plants should not be allowed to stand too thickly, as this causes them to draw up weak and feeble.

Ulm, very early dwarf variety, superior quality.....
per pkt 5c., per oz. 20c., 2 oz. 35c., $\frac{1}{4}$ lb. 0 60

Plants supplied at 60 cts. per 100.

Culture.—No cabbage is more easily raised or harder than the Savoy; the same cultivation is required as for other varieties. The Savoy succeeds best in strong, mellow loam well-enriched with manure.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

TALL CURLED SCOTCH KALE.

GOLDEN SAVOY.

LARGE EARLY HARDY WINTER DRUMHEAD SAVOY.

DWARF EARLY SAVOY.

BORECOLE OR KALE.

Carter's Improved Garnishing per pkt. 0 10

This will produce more than 20 varieties, some of which are quite equal in color to Coleus; the colors vary from rich crimson to white, laced and fringed.

Green Curled Scotch, a dwarf variety with spreading leaves, beautifully

curled..... per pkt. 5c., per oz. 0 20

German Green, or Dwarf Green Curled, good for winter greens " 5c., " 0 20

Large Leaved Jersey, large coarsely curled entire leaves, and broad white nerves, the latter making a gay contrast with the light green color of the leaves..... per pkt. 0 10

Plants furnished at \$1.00 per 100

Culture.—The seeds are sown at the time of sowing the seed of the cabbage or Cauliflower, and in the same manner, the cultivation being alike in all respects. They are harvested in autumn, before the closing up of the ground. If re-set the following spring, they will furnish an abundance of tender sprouts, which, when cooked, are superior in flavor and delicacy to the cabbage.

- Danvers**, form about midway between the Long Orange and Short Horn Carrot, growing generally with a stump root, color rich dark orange, smooth and handsome per pkt. 5c., per oz. 10c., 2 oz. 15c., $\frac{1}{4}$ lb. 30c., per lb. \$1 00
- Long Red without heart**, fine variety about 9 inches long, cylindrical in all its length, stump rooted, fine top, with small leaves per pkt. 5c., per oz. 10c., 2 oz. 15c., $\frac{1}{4}$ lb. 30c., per lb. 1 00
- Chantenay**, half long scarlet, stump rooted, new, a kind of Nantes carrot but with larger shoulders and more productive, fine variety..... per pkt. 5c., per oz. 10c., per $\frac{1}{4}$ lb. 30c., per lb. 1 00

Culture.—The Carrot does best in good light, well enriched loam. If possible the ground should be stirred to a depth of twelve to fifteen inches, incorporating a liberal quantity of well-rotted manure, and pulverizing the soil in the operation. Early sowing succeeds best. The drills should be made an inch in depth, and for the smaller garden varieties, ten inches apart. The largest sorts are grown in drills about fifteen inches apart, the plants in the rows being thinned to five or six inches asunder and kept free from weeds.

CAULIFLOWER.

FINEST FRENCH SEEDS.

- Erfurt Dwarf Earliest**, the best and finest as well as the earliest of all the varieties, 1st quality, fine large solid heads..... per pkt. 50c., per $\frac{1}{4}$ oz. \$3.00, per $\frac{1}{2}$ oz. \$4.00, per oz. 7 00

Weitche's Autumn Giant , heads perfectly white firm, large and fine	" 10c.,	" 40c.,	" 0 80

Plants furnished at \$1.00 per 100.

Culture.—The seeds may be sown in a hot bed in March or April, and the plants set in open ground late in May or July. The seed may be sown in a nursery bed in the open air in May, in shallow drills, six or eight inches apart, and when sufficiently grown the plants are to be set where they are to remain. The soil must be kept free from weeds, and stirred with the hoe from time to time. As the plants increase in size, a little earth should be drawn about the roots, and in continued dry weather an application of liquid manure will be very beneficial. As much of the delicacy and excellency of the Cauliflower depend on the quickness of growth, the soil cannot be too highly enriched or too deeply cultivated. As they begin to flower the larger leaves should be broken over them, to defend them from the sun and rain.

I can especially recommend the above named sorts of Celery.

Plants furnished at 60 cts. per 100.

Culture.—Sow in hot-bed about the end of March or early in April. As soon as the young plants can be handled, prepare a small bed under glass and make it rich and the earth fine. Here set the plants placing them two or three inches apart, water gently and protect for a day or two against the sun. In this bed the plants should remain until they are six or eight inches high, when they should be removed into trenches. Make the trenches a foot or fifteen inches deep and about fifteen inches wide, and not less than five feet apart; put about three inches of well rotted manure into the trench, throw upon this about five inches of the best soil and mix well together. Plant in two rows in the trenches, about six inches apart and eight inches apart in the rows: water immediately; earth up the plants as they grow, and keep the ground loose and open. In earthing up, care should be taken not to let in the earth between the stems of the leaves, it should only be done while the plants are dry.

LONG GREEN CUCUMBER.

SHORT GREEN CUCUMBER.

WHITE SPINE CUCUMBER.

CELERYAC.

Turnip Rooted Celery p. pkt. 5c., p. $\frac{1}{2}$ oz. 15c., p. lb. 0 30

Culture.—Sow in hot-bed in April or May and when the plants are three or four inches high they should be removed and set in rows, eighteen inches apart and a foot from each other in the line. When transplanting rub off side shoots. When two-thirds grown, earth over for the purpose of blanching.

CHERVIL, Double Curled, an aromatic sweet herb.....
p. pkt. 5c., p. oz. 20c., 2 oz. 35c., $\frac{1}{4}$ lb. 60c., p. lb. 2 00
" Plain..... " 5c., " 15c., " 25c., " 40c., " 1 25

Culture.—Sow in drills a foot apart and cover nearly an inch deep. It is sown from April to July. The leaves are fit for use when from two to four inches high. Cut them off close, and they will come up again, and may be gathered in succession during the season.

CHICORY, Large Rooted for Coffee..... p. pkt. 5c., p. oz. 10c., p. $\frac{1}{4}$ lb. 25c., p. lb. 0 60

Culture.—Sow in spring, when the ground is ready, in drills eighteen inches apart, and thin the plants to six inches apart in the drills. The soil should be deep and rich. Hoe frequently and keep the ground free from weeds.

CORN SALAD p. pkt. 5c., p. oz. 20c., p. $\frac{1}{4}$ lb. 60c., p. lb. 2 00

Culture.—An annual plant cultivated for its tender leaves, which are used as a Salad or Spinach. The seed is usually sown in shallow drills early in September. On the approach of winter the plants are covered with clean straw for protection. It is cut early in spring for salad.

CRESS.

Garden, broad-leaved.... p. pkt. 5c., p. oz. 10c., p. 2 oz. 15c., p. $\frac{1}{4}$ lb. 0 20

Double Curled, very fine..... 5c., " 10c., " 15c., " 0 20

Water " 10c., " 50c., " 75c., " 1 25

Culture—The seeds should be sown in succession, rather thickly, in shallow drills, six or eight inches apart, at intervals of about a fortnight, making the first sowing early in spring. Rake the surface of the ground smooth and fine. An ounce of seed will be sufficient for sixty feet of drill. Water cress should be sown in the same manner, and when well rooted transplanted to the banks of a running stream.

CUCUMBER—Continued.

CUCUMBERS FINEST ENGLISH VARIETIES

Carter's Model , the handsomest cucumber grown	per pkt.	0 50
Telegraph , most prolific and best winter sort.....	"	0 50

Pots, containing 3 plants of the above furnished at 25cts.

Sion House , a favorite variety.....	per pkt.	0 50
Lord Kenyon's Favorite , a popular English sort.....	"	0 50

Culture.—For early use, sow in hot beds, making a hill in the centre of the bed. Cover the sash at night with mats for protection. During the growth of the plants, admit air every day, giving as much light as possible. If they are to be removed sow in pots. The essentials to the growth of the cucumber are heat and a fair portion of moisture. Do not plant in open air until there is a prospect of continued warm weather. When planted early, the seeds are liable to decay in the ground and the young plants frequently cut off by the frost.

The hills should be five or six feet apart in each direction, fifteen or eighteen inches in diameter and a foot in depth; fill them three-fourths full of thoroughly digested compost, and then draw four or five inches of earth over the whole, raising the hill a little above the level of the ground. Plant 15 or 20 seeds in each, cover half an inch deep, and press the earth smoothly with the back of the hoe. When all danger from bugs and worms, is passed, thin out the plants, leaving but three or four of the strongest to a hill.

As fast as cucumbers attain a suitable size they should be plucked, whether required for use or not, as fruit left to ripen on the vines soon destroys their productiveness.

Giant Violet, very fine kind.....				10	25	0 50	

Plants 25cts. per doz

Culture.—The seed should be sown in a hot bed in March or April, at the time and in the manner of sowing tomatoes. The young plants are however more tender, and should not be allowed to be chilled as they recover from the effect very slowly. The seedlings should not be transplanted into the open ground until the commencement of summer weather, when they may be set out into rows, two feet apart, and two feet asunder in the rows. Keep the ground free from weeds, and earth up the plants a little, in the process of cultivation. If no hot-bed is at hand, sufficient seedling plants for a small garden may be raised by sowing a few seeds in March, in flower pots, and placing them in a window of the dining-room or kitchen.

ENDIVE.

	per pkt.	per oz.	per 2 oz.	p. ¼ lb.
Green Curled Summer , very fine, hardy, leaves dark green..	5c.	30	55	1 00
" " Winter , leaves pale green.....	5c.	30	55	1 00
White Curled Broad Leaved or Batavian	5c.	30	55	1 00

Culture.—Sow in close drills or broad cast in hot-beds early in spring, for transplanting. The winter varieties may be sown in July, where the plants are to remain, thinly, in shallow drills, a foot apart, for smallest early varieties, and fifteen inches for the large broad leaved sorts. Thin out to a foot asunder, as soon as they are large enough to handle, and keep the ground about them loose and free from weeds. Bunch them by gathering the leaves in the hand, and tying them together near the top with matting. Common-flower pots inverted over the plants, will be found a safe and effectual means of rendering them white and crisp.

MUSHROOM SPAWN.

English	per brick 0 25
----------------------	----------------

Direction for growing Mushrooms.—A quantity of stable manure should be collected, the less straw in it the better, and thrown together in a heap to ferment and acquire heat. As the heat is generally violent at first, it should previously to making the bed, be reduced to proper temperature by frequently turning it during a fortnight or three weeks, which time it will require for all parts to get into an even state of fermentation. During this time, should the weather be showery, the heap will require some protection which may be afforded by covering with litter, as too much wet would deaden its fermenting qualities. When the fiery heat has passed off, choose a dry sheltered spot of ground on which to make the bed (any cellar or shed will do.) Mark this out five feet broad; make the length according to the quantity of mushrooms required. On the space marked for making the bed, throw out a trench about six inches deep. The mould may be laid regularly at the side and if good, will do for earthing the bed hereafter. In this trench lay about four inches of good long litter for forming the bottom of the bed; then lay on the prepared dung regularly over the surface beating it down with a fork, gradually drawing in the sides to the height or five feet until it is narrow at the top like the ridge of a house. In this state it may remain ten days or a fortnight, during which time the temperature should be ascertained towards the middle of the bed, and when found of gentle heat, the bed may be spawned, for which purpose the spawn (if in bricks) should be broken into pieces about an inch and a half or two inches square, beginning within six inches of the bottom of the bed, and in lines about eight inches apart, the same distance being allowed between the pieces of spawn, which are best put in, by one hand raising the manure up a few inches, whilst with the other the spawn can be laid in and covered at the same time. After spawning the bed, if the heat is regular, it may be earthed over. After the surface is levelled with the back of the spade, there should be laid on two inches of mould which should be beaten closely together, and, when finished covered a foot thick with good oat or wheat straw, over which, if in the open ground, mats should be laid on to keep the bed dry. When the bed is to remain permanently, a covered shed will be found convenient.

YELLOW DANVERS ONION.

LARGE RED WETHERSFIELD ONION.

M U S T A R D .

White French..... per pkt. 5c., per oz. 10c., per $\frac{1}{4}$ lb. 15c., per lb. 0 40

Culture.—For early use sow in hot bed in February or March, and for general crops, sow early in May, in the open ground thickly in drills, ten or twelve inches apart. Repeat the sowings about every fortnight, for a succession. It is cultivated in the same manner as Cress.

N A S T U R T I U M .

Tall, mixed..... per pkt. 5c., per oz. 20c., per 2 oz. 35c., per $\frac{1}{4}$ lb. 60c., per lb. 2 00

Dwarf, mixed..... 5c., " 25c., " 40c., " 75c., " 2 50

Culture.—Sow in May or early in June in rows or batches, about an inch deep. The growing crop may be supported by staking or bushing as practised with peas, or the taller growing sorts may be shortened in, which will induce a strong stocky habit of growth. While the plants are young they will require some attention in order that they may be properly attached to the stakes or trellises provided for their support. Before planting, the husk or outside covering of the seed should be rubbed off.

HOLLOW CROWN PARSNIP.

LONG SMOOTH PARSNIP.

SHORT OR ROUND PARSNIP.

O N I O N .—*Continued.*

IMPORTED FRENCH VARIETIES.

- New Giant Rocca of Naples**, a fine variety of delicate flavor, large globular shape and light brown skin. p. pkt 5c., p. oz. 25c., p. 2 oz. 40c., p. $\frac{1}{4}$ lb. 75c, p. lb. 2 50
- Tripoli Giant White**, flavor exceedingly mild and pleasant. p. pkt. 5c., p. oz. 30c., p. 2 oz. 55c., " 1.00, " 3 00

Culture.—The Onion requires a light, loamy mellow soil; and, unlike most kinds of garden or field vegetables, succeeds well when cultivated on the same land for successive years. Previous to sowing, the ground should be thoroughly spaded over or deeply ploughed, and the surface made smooth and even. The seed should be sown as early in the spring as the ground is in good order, in drills fourteen inches apart and half an inch deep. When the plants are three or four inches high, thin to two inches asunder. In process of culture, be careful not to stir the soil too deeply or to collect it about the growing bulbs. The soil cannot be too rich for the vegetable. From five to six pounds of seed are required to sow an acre.

TOP ONION SETS per lb. 30c., or market price.

Culture.—Plant in April or May four inches apart in rows eight inches asunder. Stems that bend heavily require to be supported.

ORACH or Mountain Spinach p. pkt. 5c., p. oz. 20c., p. 2 oz. 35c., p. $\frac{1}{4}$ lb. 0 60

Culture.—Sow in the spring as soon as the ground is ready, in drills eighteen inches apart and three-fourths of an inch deep. When the young plants are two or three inches high thin them to ten or twelve inches apart, and cultivate in the usual manner. For a succession, sowings may be made at intervals of two weeks until June.

Tom Thumb, Cleveland's Improved , white dented, earliest dwarf pea known, marked improvement on the old pea of that name, vines being completely covered with pods filled to almost bursting with peas, owing to its hardy nature, can be sown very early, 6 to 8 inches.....	15c.	1 75	6 00
McLean's Advancer , dwarf, blue, wrinkled marrow, long pods well filled, one of the finest peas in cultivation, 2 feet.....	15c.	1 75	6 00
Bishop's Dwarf Long Pods , an exceedingly prolific and valuable variety, 1½ feet.....	15c.	1 75	6 00
Blue Imperial , great bearer, fine flavor, 2 feet.....	10c.	1 25	4 00

MAIN CROP.

Fortyfold Wrinkled Marrow , similar in habit to the Champion, but much superior to it in every way, having remarkably well filled pods of a bright green color, 4 feet.....	15c.	1 75	6 00
Laxton's Prolific , white, true to name, one of the most prolific, ripens with Champion, recommended rather for its yielding than eating qualities, 2½ to 3 feet.....	15c.	1 75	6 00
Harrison's Glory , a large wrinkled marrow, one of the finest kinds, abundant bearer, 2 feet.....	15c.	1 25	4 80
Champion of England , a general favorite, one of the best in cultivation, 3 to 4 feet.....	15c.	1 25	4 80
Yorkshire Hero , large late wrinkled dwarf, of branching habit, an abundant bearer, 2½ feet.....	15c.	1 50	5 40
Veitche's Perfection , very large marrowfat, delicious flavor, 3 feet....	15c.	1 50	5 40
British Queen , tall mammoth marrow, one of the best late varieties, 6 ft.	15c.	1 25	5 00
Carter's Balmoral Castle , extremely productive with grand pods in the shape of Laxton's Supreme, but much longer and better filled, a very handsome desirable pea.....	25c.	2 50	9 00
Carter's Commander-in-Chief , one of the finest in cultivation, it is a green wrinkled marrow of exquisite flavor, with slightly curved pods, frequently containing 10 large peas.....	25c.	2 50	9 00
Carter's Telephone , green wrinkled, a week earlier than Champion of England bearing in great abundance, pods 5 to 7 inches long, containing 8 to 12 peas of unequalled flavor, 3 feet.....	25c.	2 25	8 40
Carter's Stratagem , said to be the finest dwarf wrinkled pea grown, vines grow to a length of 2 feet, and are literally covered with immense pods many measuring nearly 6 inches in length and frequently containing 10 large fine flavored peas.....	25c.	2 25	8 40
Royal Dwarf White Marrowfat , very productive, good for field culture, 2 to 3 feet.....	10c.	0 75	2 00
Black-eyed Marrowfat , a favorite market variety, hardy and productive, 3 feet.....	10c.	0 60	1 75

Price varies with the market.

SUGAR OR EATABLE POD.

Early Dwarf ,	{ These varieties can be used when green like }	2 feet, p. lb.	0 30
Tall White Scimitar ,		string beans. { 4 " " "	0 30

Culture.—Peas come earliest to maturity in a light rich soil, well manured the previous year. Plant as early as the ground can be worked in the spring, and for succession every two weeks through out the season. Plant in single or double rows, from three to six feet apart, according to the height of the peas, about an inch apart in the rows, and three deep. When sown in double rows, the two drills are made about eight inches apart. This method is preferable as one row of stakes will serve for the double row of peas. A pint of the smaller sort will sow a row about six feet long. The crop should be gathered as it becomes fit for use. The dwarf varieties will not require stakes.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

LONG RED PEPPER.

TOP ONIONS.

CHILI PEPPER.

SWEET PEPPER.

PEPPER (CAPSICUM.)

Large Red , fruit a brilliant coral red, conical shape, generally curved towards the end, very productive.....	p. pkt. 5c.	p. oz.	0 40

Large Bell or Bull-Nose , an early variety, of good flavor.	" 5c.	"	0 40
Sweet Spanish or Square , one of the largest and earliest varieties, flesh sweet, mild and pleasant.....	" 5c.	"	0 40
Chili , true, very piquant and prolific.....	" 5c.	"	0 40
Spanish Monstrous or Mountain , very sweet, 6 inches long and 2 inches thick.....	" 5c.	"	0 40

Plants of the above furnished at 25cts. per doz.

Culture.—Sow in hot bed early in April, in shallow drills six inches apart, and transplant in the open ground when summer weather has commenced. The plants should be set in warm mellow soil, in rows sixteen inches apart and the same distance apart, in rows. Hoe frequently, and keep the ground loose and free from weeds.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

I have much pleasure in recommending to my customers the following very choice selection of *new potatoes*. The price charged for each variety is the same, viz: for 1 lb. by mail, 25c., per 3 lbs. by mail, 50c., per peck, \$1.00, per half bushel, \$1.50, per bushel, \$2.50; These prices include the packages.

Astonisher. Late, a little longer than broad, quite square cut at the ends, round, oval, skin light red, coarsely netted, eyes few, size uniformly large to very large, very few small.

Bonanza. Medium, oval or oblong, more or less flattened, skin light red, finely netted, eyes plenty, size medium to large, the best table potato of any of the late varieties, and retains its quality till new potatoes come in.

Crane's June Eating. Very early, oblong to long, round, skin white, clouded with purple tint, eyes not numerous, smooth, medium to large size, vines medium height but robust.

Charles Downing. Very early, oblong, oval, skin white, netted, eyes few, very smooth, medium size, very handsome and of superior quality.

Empire State. Medium, long, round or oval, skin pure white, eyes numerous, large, some prominent, others even or little depressed; size large, cooks white and dry, one of the best yielders.

Everette Medium Early. one of the finest kinds in cultivation, good keeper, color red.

Lee's Favorite. extremely early potato, combining more good qualities than any other early variety, is two weeks earlier than the early rose, similar in form, but distinct in color, being a light flesh color, shading to pink, eyes nearly even with the surface, tubers uniformly good, market size, it is the purest flavored potato of all, cooks as white as flour.

New Queen. a very fine variety, similar in color to the Beauty of Hebron, but earlier and a better yielder, a good keeper.

Not's Victor. Very early, oblong, nearly round, skin light russety brown, eyes plenty, mostly even with surface, size medium to large, flesh white and mealy.

Puritan. Fine new white skin and white flesh kind, probably the best yet introduced, enormously productive and very early,

Queen of Roses. Early, oblong to long, oval, skin light rose color, slightly netted; eyes not numerous, some prominent, mostly even; size medium to large, one of the very best of the rose family.

Summit. Early, long, oval, skin buff, with pink tint, eyes not very numerous, large, some depressed; size from medium to large, remarkably productive.

Sunlit Star. Very early, oblong to long, oval, skin light flesh color, with pink eyes, which are plenty, very prolific, fine variety.

OLDER VARIETIES.

Early Gem. one of the best early varieties, very productive and of fine quality, deep pink:....Market price

Mammoth Pearl. early and productive; flesh pearly white and mealy, hardy and vigorous grower..... " "

STANDARD VARIETIES.

Beauty of Hebron , one of the best early sorts, white skin and flesh.....	} Market Price.
Snow Flake , one of the earliest varieties. Tubers good uniform size; skin white, flesh fine grained, snow white when boiled.	
Extra Early Vermont , seven to ten days earlier than the Early Rose, enormously productive; excellent flavor, habit and growth like the Early Rose, flesh very white, dry and floury, an excellent keeper	
Early Rose , a universal favorite; one of the best and earliest.	

And several other kinds.—Special quotations for large quantities.

Culture.—The earliest crop should be planted in light soil, in a warm situation as soon as the ground can be worked in the spring. Potatoes are usually planted in drills or hills. In good garden soil, the less manure that is used, the better will be the flavor produced, and they will be much less affected by disease. When in hills, they should be planted from three to three and a half feet apart, the distance to be regulated by the habit of the variety under cultivation. If in drills, plant from two and a half to three feet apart, although some of the earliest kinds may be successfully grown at eighteen or twenty inches. Of sets formed by the division of an average sized tuber into four parts, three may be allowed to a hill, and in drills the sets may be planted from seven to twelve inches asunder, according to the habit and size of the plants. As soon as the plants are fairly above the surface, hoe and stir the soil about them and draw the earth gradually about the hills or drills at each successive hoeing and keep the earth free from weeds.

P U M P K I N .— For field and garden culture,

Canada Field , very large and productive, best for stock.....	p. pkt. 5c.,	p. ½ lb. 10c.,	p. lb. 0 30
Cheese , best for cooking.....	" 5c.,	" 30c.,	" 1 00
Sugar , a very fine variety.....	" 5c.,	" 30c.,	" 1 00
Cashaw , table variety, grows very large.....	" 5c.,	" 30c.,	" 1 00
Mammoth Canada , a very large variety, frequently weighing over 250 lbs. Seed saved by myself.....	p. pkt. 10c.,	p. oz. 20c.,	p. ¼ lb. 60c., p. lb. 2 00

Culture.—The seeds may be planted after the middle of May, amongst Indian Corn, or in the field or garden, in hills eight or ten feet apart each way, allow three or four plants to remain in each hill. Cultivate in the same manner as Melons or Cucumbers, but avoid planting them any where near either of them.

Manmoth California , a winter radish averaging 10 inches in length and 2½ inches in diameter, flesh white, solid, good flavor, leaves long and strap-shaped.....	5c.	20c.	35c.	50c.	1 25

Culture.—For early use, sow in hot-beds in March or April, and, as the plants come up, admit air every day in mild weather. For a general crop, sow in the open ground as soon as the soil is fit for working, in drills eight or ten inches apart. Water in dry weather, and keep the ground free from weeds. For a succession, sowings may be made at intervals of ten or twelve days throughout the season.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

BLACK SPANISH WINTER RADISH.

CHINESE ROSE WINTER RADISH.

LONG SCARLET SHORT TOP RADISH.

Raphanus Caudatus, this belongs to the radish tribe, but the red pods only are eaten

These attain to the length of 20 or 30 inches in a very short time ; can be sown in the open air or in pots and transplanted. Pods should be eaten when about half grown

per pkt. 0 10

Rhubarb, Victoria and other sorts.....

per pkt. 5c., per oz. 0 25

Roots of the above at from 25 cts. to 50 cts. each.

Salsify, or Vegetable Oyster.... per pkt. 5c., per oz. 20c., 2 oz. 35c., $\frac{1}{4}$ lb. 60c., per lb. 2 00

Culture.—Sow at the same time and in the same manner as carrot seed. Make the drills fourteen inches apart, cover the seeds an inch and a half in depth, and thin while the plants are young to four or five inches asunder. Cultivate in the usual manner.

Scorzonera,..... per pkt. 5c., per oz. 20c., 2 oz. 35c., $\frac{1}{4}$ lb. 60c., per lb. 2 00

Culture.—Sow in spring in drills one foot apart, and thin out to four inches apart in the row. Transplant the following spring, into rows three feet apart, and eighteen inches apart in the row. Before planting, the ground should be well enriched and thoroughly trenched. Late in the autumn, when the plants begin to decay, clear them all off, then bank up the ridges, laying about eight inches of earth above the crowns of the roots. After the cutting is over in the spring, level the earth again, adding a good coat of manure.

Sea Kale, cultivated for its roots which are used as Asparagus ... per pkt 5c., per oz. 0 25

Culture.—Sow the seeds early in the spring in drills a foot apart, thin the plants when a few inches high to nine inches asunder. The following spring, transplant into rows, three feet asunder and three feet apart in the row. As some varieties grow to a much larger size than others, a corresponding distance should be accorded them. Keep the soil well enriched, open and clear of weeds.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

SCORZONERA.

RHUBARB.

SALSIFY.

Shallots per lb. 0 20

Culture — Plant in any light dry soil, that has been cultivated as well as manured for a year or two, divide the clustered roots into separate off setts, plant in shallow drills one foot apart, placing them about six inches apart in the drills, keep free from weeds and stir the ground occasionally.

Sorrel, Broad Leaved..... per pkt. 5c., per oz. 15c., per 2 oz. 0 25

Sow in shallow drills 12 inches apart, and thin out to six inches; the roots may be divided in spring or fall and set in rows the same distance asunder.

The leaves possess a pleasant acid taste, and are used for mixing with salad.

SPINACH.

Virofley, new variety, leaves very large and thick., p. pkt. 5c., p. oz. 10c., p. 2 ox. 15c., p. ½ lb. 20c. p. 40c.

Very Large Flanders, hardy productive variety, very broad leaves..... “ “ “ “ 0 40

Lettuce Leaved, of superior quality, favorite variety..... “ “ “ “ 0 40

Large English, prickly, very hardy, good for fall sowing..... “ “ “ “ 0 40

Round or Summer, fine variety, generally used for spring sowing..... “ “ “ “ 0 40

Long Standing (Late Seeding) New. This is the best of the varieties. The leaves resemble those of Flanders Spinach, but are as thick and dark colored as the Lettuce Leaved. “ “ “ “ 0 40

Culture. — Spinach is best developed and most tender and succulent when grown in rich soil. Sow early in spring, in drills twelve or fourteen inches apart. For a succession, the seed may be sown at intervals of a fortnight from the end of April till August.

Strawberry , a distinct species, good for preserving.....	10c.	50c.
Hubbard's Fern Leaved , very early, of medium size, dwarf habit.....	5c.	30c.	55c.	1 00	3 00
New Perfection , color blood red, early as the Canada Victor, round in shape, perfectly smooth and very solid, of the very best quality, enormously productive, ripens all over and through at the same time.....	5c.	30c.	55c.	1 00	3 00
Very Early Dwarf Red , very fine, exceedingly prolific, smooth skinned and full fleshed, very small sized plant, good for forcing.....	per pkt.	10c.	per oz.	0 50	

For newer varieties see novelties—Plants of the above varieties supplied at \$1.00 per 100.

Culture.—Sow the seeds in a hot-bed, in March, in drills five inches apart, and an inch deep. When the plants are two inches high they should be removed to another part of the bed and pricked out four or five inches apart, or removed into small pots, allowing a single plant to a pot. As early in May as the weather is suitable the plants may be set in open ground, three feet apart in each direction. Water freely at the time of transplanting. Shelter from the sun for a few days until the plants are well established, and cultivate in the usual manner during the summer.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

TETRAGONIA or New Zealand Spinach,..... p. pkt. 5c., p. oz. 0 20

Culture.—The seed may be sown in the open ground from April to July in rich moist soil. Make the drills three feet apart and about an inch and a half deep. Sow the seed thinly so as to secure a plant for each foot of row.

It is cooked and served in the same manner as common Spinach.

TOBACCO.

Connecticut Seed Leaf, hardiest and best variety for cultivation in Canada; leaves eighteen inches to two feet long and from nine to twelve inches in diameter..... p. pkt. 5c, p. $\frac{1}{2}$ oz. 30c., p. oz. 0 50

Virginia, a well-known variety, more extensively cultivated in the United States than in this country.. “ 5c., “ 40c., “ 0 75

Havana, succeeds well in Canada, but it is not so extensively grown here as the Connecticut..... “ 5c., “ 40c., “ 0 75

Maryland, a very fine variety..... “ 5c., “ 40c., “ 0 75

Kentucky, extra choice variety..... “ 5c., “ 40c., “ 0 75

Plants furnished at \$1.50 per hundred.

Culture —Tobacco requires a rich soil, well pulverized. The seed should be sown about the last of April or early in May, in a nursery bed thinly in drills. Transplant from 1st to 20th June to straight rows three feet apart each way. When the plants are large enough they should be topped, the leaves nearest the ground broken off and the bud taken out, leaving on the stalk the number of leaves designed for the crop: eight or ten leaves are sufficient for a plant.

Culture.—Turnips for early use should be sown in the garden last of April or early in May. Sow the seed broadcast or in drills. If in drills, they should be made about fourteen inches apart, and half an inch in depth. The young plants may be thinned to five or six inches asunder. For a succession, a few seeds may be sown at intervals of a fortnight until the middle of August.

Swede Turnips may be sown from the middle of May to the beginning of July either broadcast or in drills, fifteen to eighteen inches apart. Early sowings will unquestionably give the greatest product; while the later grown bulbs, though of smaller dimensions, will prove of quite as good quality for the table.

Culture.—The generality of aromatic pot and sweet herbs thrive best in a rich mellow free soil. The seeds may be sown as early in spring as the ground will allow, either broadcast or in drills, at suitable distances from each other. The beds should be kept free from weeds, and watered frequently in dry weather.

Lucerne or Alfalfa , valuable variety of vigorous growth.....	"	0 20

AGRICULTURAL GRASSES

When we consider the character of our climate and the necessity that exists for feeding our cattle in-doors for five or six months of the year, we can appreciate the value of the grass crop on which we have to depend, which is by far the most important in this country and claims our farmers' best attention. Of our cultivated grasses, timothy holds the first place and appears to be better adapted to supply the wants of animals and is more extensively grown in this country than any other variety. It is however, difficult to over estimate the importance to a farmer of a good selection and proper mixture of grass seeds for the various purposes of cultivation. For mowing, soiling permanent pasture or an alternate crop, it is a well established fact that a mixture of only two or three species of grasses or clover will produce a less amount of hay than can be obtained by sowing a larger number of species together. We limit our mixture to a few species and fail to arrive at the most profitable results. In a piece of land seeded with one or two favorite grasses only, small vacant spaces will be found which in the aggregate will diminish very considerably the yield of an acre.

To farmers however, living near Montreal, who intend growing hay for this market or for export to the United States, I would not recommend a mixture of grasses for meadows, as I believe it will pay better to sow only pure Timothy Seed, with Clover, putting 20 to 25 lbs. of Timothy and 3 to 6 lbs. of Clover to the acre. The Clover will probably die out after the second year, leaving the Timothy, which, if well saved will command a much higher price in this and the American market than any other kind of hay, and if the crop is not so large the difference in price will compensate for the deficiency in quantity.

For permanent pasture it is highly important that such species should be selected, as blossom at different periods, in order to secure as far as possible a luxuriant growth during the season. A large number of species will ensure a much denser growth than the same number of seeds of one or two species, and a dense growth of many species will exhaust the ground less, as they live to some extent upon different constituents.

A mixture is sometimes wanted for pastures that are much shaded with trees and in such cases, those species should be selected which do well in such situations, and which blossom at different seasons so as to give a succession of forage, and at the same time the requisite amount of nutritious elements.

Parties who may require mixtures of grasses for various purposes may rely upon their orders receiving my personal and careful attention, I have supplied many of my customers with mixtures of grasses for meadows, pastures and lawns which have given perfect satisfaction.

The following named grasses comprise the leading species.

Agrostis Alba, English Bent , an excellent variety for lawns, succeeding best in moist situations—35 lbs. to the acre ..	per lb.	0 30
Agrostis Stolonifera, Creeping Bent , a valuable variety for lawns, also highly recommended for permanent pasture, growing earlier and later than most others—35 lbs. to the acre.....	"	0 25
Agrostis Vulgaris, Red Top , valuable as a mixture in pasture and lawns, suc- ceeds well in almost any soil—2 to 3 bushels per acre.....	"	0 15
Alopecurus Pratensis, Meadow Foxtail , a valuable pasture grass of early and rapid growth, thrives best on rich moist strong soil—25 lbs. to the acre...	"	0 30

Poa Nemoralis, Wood Meadow Grass , excellent for pasture or lawns, having a nutritious herbage of early growth, thrives well under trees—25 lbs. to the acre.....	p. lb. 0 35
Poa Pratensis, Kentucky Blue , valuable variety for lawns, best in dry soils; retains its verdure during the winter. Extensively grown in many parts of the United States—1½ to 2 bushels per acre. Market price.....	" 0 15
Poa Serotina, Fowl Meadow Grass , suitable for low moist lands, excellent grass for Oxen, Cows and Sheep. Thrives best when mixed with other grasses—35 lbs. to the acre.....	" 0 30
Poa Trivialis, Rough Stake Meadow Grass , good for pasture or meadow on moist soils, producing abundance of nutritious herbage—25 lbs. to the acre.....	" 0 35
Grasses and Clover Seeds for laying down land to Meadow or Pastures , carefully prepared to suit different soils.....	
Mixed Grasses for low lands	
Finest Mixed Grass Seeds for Lawns, Parks, Cricket Grounds, Gardens, &c., &c. , suitable for forming a beautiful close compact evergreen sward throughout the season.....	

WILLIAM EVANS' ILLUSTRATED CATALOGUE

Directions for preparing and sowing Lawns.

To form a good close velvety turf is sometimes a difficult matter and careful preparation of the ground proposed to be laid down for a lawn is necessary. This should be commenced by draining, if found requisite, and digging to the depth of from, 6 to 12 inches according to the nature of the soil, the surface must be made entirely level and firm with a heavy roller and afterwards carefully raked to remove stones, &c. The greatest care should be taken to give uniform foundation at a uniform depth and to make the upper six inches everywhere the same, and of uniform stricture of good garden soil. When prepared in this way, there should be no uneven spots, hills or hollows which disfigure many lawns and make a variety of tints in different parts; if the land is stony a supply of good mould should be spread over it to the depth of 2 or 3 inches, and the whole thoroughly enriched with well rotted stable manure.

After the ground has been made thoroughly fine and clean, a heavy roller should again be used to make it perfectly level, it should then be raked and the seed sown, about 40 lbs. being required to seed a Canadian acre or arpent which contains 3600 square yards.

When the grass has well taken, it can only be kept in good order by repeated mowing and rolling, occasional top dressing and cleaning with a lawn rake.

It will sometimes happen that annual weeds, indigenous to the soil come up, these can be checked, if not destroyed by mowing them off as soon as they make their appearance; dandelions and daisies too will often appear and these may be cut up, each one singly, about an inch below the surface, and a little salt dropped over the cut plants.

For lawns requiring improvement, it is only necessary to sow fresh seed at the rate of about 20 lbs. an acre, either in the spring or autumn—in this country, spring sowing will answer best, using a small tooth rake and rolling afterwards.

Moss in lawns is generally a sign of poorness in the soil or want of drainage; to effect its removal rake off as much of the moss as possible, apply a top dressing of quick lime, mixed with rich compost and sow more seed in spring. A top dressing of soot applied in spring at the rate of 11 to 15 bushels per acre will very materially increase the growth of the grass. On croquet grounds where turf has become bare through constant use a thick sowing of seeds on the bare spots early in the spring, rolling subsequently and mowing, as soon after as practicable will be found very beneficial. A slight dressing of fine manure over the whole ground late in the fall will greatly assist the growth of the finer kinds of grass, and help to produce a close growing turf. Mowing alone will not insure a good bottom, it should also have the compression which a roller only can give.

MILLETS.

Annual forage plants valuable for furnishing green fodder and hay, in from sixty to ninety days, from the seed, producing on good soils an extraordinary yield of excellent forage, highly relished by stock. All varieties should be cut in the blossom. Sow from one half to three-quarters of a bushel per acre.

Common Millet, (<i>Panicum Miliaceum</i>) Very early; height two to three feet; foliage broad and very abundant; heads, very open; branching panicles; seeds, glossy, oval; somewhat flattened per lb.	10cts.
German or Golden Millet. Medium early; height, three to five feet; heads closely condensed, spikes, very numerous; seeds round, golden yellow, in rough, bristly sheaths, new and in great favor	10cts.
White French Millet, early; height, from three to five feet. Spikes numerous, seeds, large round, pure white	10cts.
Hungarian (Grass) Millet, (<i>Panicum Germanicum</i> .) Early; height, two or three feet; abundant foliage and slender head; withstands drought and yields well on light soils	10cts.

Prices vary with the market.

—:O:—

Wild Rice, for seeding lakes or lagoons per lb. 35c., in 10 lbs. lots. 0 30

Culture.—Sow in water from six inches to five or six feet deep. Soft black mud bottom preferred, must be mud. Work the bottom over carefully and pick out the best places. Sow as you would any other grain. Where pond lilies grow it will begin to grow the day it is sown. Avoid a windy day, the rice being light. After being on the water a few moments it gets wet and sinks to the bottom. If sown in a river, avoid the current as much as possible, sow in bays or lagoons. The rice is a self sower in the fall; the seed drops off when ripe and the old stalks sink to the bottom, decompose and make manure for the seed.

MISCELLANEOUS.

As the prices of the following vary with the market, those given are merely approximate.	
Wheat, Winter, several choice sorts Market price.
“ Black Sea, a red bearded spring variety, well adapted for this country,	“
ripens early	“
“ Fife, a bald variety of Spring Wheat, a general favorite, not liable to rust	“
“ Manitoba, from the North West. Very choice sample	“
“ White Fife, bald spring, very hardy and productive	“
“ Golden Globe, bearded, similar to Black Sea	“

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

MISCELLANEOUS.—Continued.

Wheat, Lost Nation, a very productive bald spring variety Market price.
 " **White Russian**, same as the preceding "

And other choice varieties.

Barley Two Rowed, choice selected. "
 " **Four and Six Rowed**, early, succeeds well on most good soils, productive and strongly recommended. "
 " **Black**, excellent for feeding purposes and is gaining popularity every year per bushel 1 20
Oats, White Canadian, superior quality, choice clean seed.

And several other choice kinds

Peas, Golden Vine for Field Culture, a well known productive variety market price per bushel 1 10
 " **Prince Albert**, larger than the preceding and equally productive market price " 1 10
 " **Black Eyed Marrowfat**, grown extensively by our market gardeners for selling in a green state. " 1 60
 " **White Marrowfat**, a fine variety for canning when green. " 1 60

Indian Corn for soiling, several choice, quick growing varieties, selected expressly for seed, all of which have succeeded well and given perfect satisfaction for the past 10 years, grow very tall, yield a large amount of forage for cattle. Market price

Tares, Black, } Well known varieties. Very productive when sown on
 " **Grey,** } rich soil, can be cut several times during the season....
 " **White,** }

Buckwheat, Silver Hull, much superior and earlier than the common kind, continues in bloom longer, matures earlier and yields nearly double under the same conditions. The flour is also much better. 1 00
 " **Common, selected**, clean seed, market price " 0 75

Rye, Spring, } Choice Seed. Market price.... per bushel of 56 lbs. 1 10
 " **Winter,** }

Horse Beans, for seed " 60 " 2 50

Beans, White, for seed and cooking purposes, market price.....

Flax, choice samples for sowing " 56 " 2 00

Lentils Extra Large Yellow, for seed or cooking. per lb. 0 50

Sainfoin, very important forage plant, thriving best on dry calcareous soils to which its culture is generally confined, quantity of seed required per acre about 50 lbs. " 0 20

Sunflower Large Russian " 0 25

" **Common** " 0 20

Spurrey, common Spargula Arvensis, much used in Germany where it is highly esteemed as winter pasture for cattle and sheep, it is sown on stubble after corn, grows from 6 inches to a foot high. " 0 25

Holchus Saccharatus, (Chinese Sugar Cane). " 0 15

" **Sorghum** (Broom Corn). " 0 30

Kennedy's Early Amber Sugar Cane. This plant has been tested for several years past—Its saccharine qualities, and earliness highly recommend it. It usually grows 6 to 8 feet high. All kinds of farm stock are fond of the seed " 0 15

Rape Spring, for sheep " 0 12

Prices are not quoted in the miscellaneous list for several articles, as they vary with the market, but samples and quotations will be furnished on application.

FLOWER SEED DEPARTMENT.

REMARKS

ON THE

CULTIVATION OF FLOWERS.

Annual Flowers are among the most beautiful ornaments of the garden ; their richness of coloring, their graceful form, the delicate fragrance of many of them, their great variety, the length of time they remain in bloom, together with their comparative inexpensiveness render them indispensable in every garden.

The term "annual" is applied to plants which are sown in spring, flower the same year, mature their seeds, and then perish. Annuals are divided according to their hardiness into three classes, viz : Hardy, Half-hardy and Tender. Hardy Annuals may be sown in the open air, during the month of May, or occasionally in the fall, as they will bear considerable frost. Half-hardy Annuals may also be sown in May or early in June. Tender Annuals require to be sown and brought forward in a hot bed. As our summers are so short almost all Annuals that will bear transplanting are better started in a gentle hot-bed : but as many of the most showy and beautiful, such as Argemone Mexican, Bartonia Aurea, Calendrina Grandiflora, the different varieties of Candytuft, Convolvulus Minor and Major, Eschscholtzia, varieties of Larkspurs, Lupins, Mignonette, Sweet Peas, Poppies, &c., &c., are impatient of removal, they should be sown where they are to remain ; those that require rather a long season for their full development, may be sown in pots, two or three seeds in each, as they can be turned out of the pots without checking their growth.

When a hot-bed cannot conveniently be had, sow the seed in a nursery bed, prepared in the open air. For this purpose choose a dry sheltered spot, facing south or east, mark out the ground required, and dig into it some well rotted manure, mixing it thoroughly with the soil, rake the surface perfectly smooth, and sow the seed in rows, placing a label at the end of each row, bearing the name of the flower and the date of sowing. Immediately after sowing, if the ground is dry, water the bed gently. When the plants are large enough to handle, thin them out ; if allowed to grow too thickly, they become spindly and weak and will not bear transplanting.

Biennials flower the second, and sometimes the first year, from seed and then perish ; consequently they should be sown every year to keep up the succession of bloom.

Perennials generally flower the second year from the time of sowing, remain in the ground and continue to flower for several years.

Many Perennials, however, flower the same year that they are sown and are treated as Annuals. Biennials and Perennials should be sown in the open ground in a nursery bed in May or June, and transplanted to the place where they are to remain early in fall, so that they may be fully established before winter sets in.

The time for sowing flower seeds is of the greatest importance. If they are sown too early, or when the ground is cold and wet they are liable to perish ; wait till all danger of frost is passed and the weather becomes mild. Choose a dry day for sowing.

The mode of sowing is also of importance. The depth at which seeds should be sown varies with their size. Large seeds, such as Lupins, Sweet Peas, Martynia Fragrans, Gourds, Marvel of Peru, Morning Glory, Convolvulus Minor, Canna Indica, Nasturtium, Palma Christi, Sunflower, Scabiosa, &c., may be sown from a half to three-quarters of an inch deep. Asters,

Balsams, Candytuft, Helicbrysum, Hedysarum, Hollyhock, Cypress Vine, Larkspur, Crimson Flax, Malva, Malope, Marigold, Mignonette, Nemophila, Phlox Drummondi, Stocks, Verbenas, Zinnias, &c., from an eighth to a quarter of an inch deep. Ageratum, Amaranthus, Anthirrhinum, Browallia, Carnation, Clarkia, Coreopsis, Daisy, Forget-me-not, Godetia, Jacobea, Lophospermum, Maurandya, Lobelia Catchfly, Viscaria and a great many others require to be merely covered. Calceolaria, Humea Elegans, Lobelia, Oxalis Rosea, Petunia, Portulaca, &c., should be sown on the surface, pressed lightly in and shaded from the sun for a few days till the young plants come up. Seeds which have a woolly covering, such as Acroclinium, Globe Amaranth, Rhodanthe Manglesi, &c., should have it rubbed off before sowing. Sweet Peas, Lupins, Nasturtium, should be steeped in warm water for a few hours before planting.

PREPARING THE GROUND.

As the strength and beauty of the plants, and their capability to produce both a profuse and prolonged bloom, will depend on the richness of the soil, and the manner of preparing it to receive the young plants, the greatest pains should be taken to do it thoroughly, therefore dig deeply, work in plenty of well rotted manure and a liberal supply of leaf-mould, when it can be procured. In digging, use a fork in preference to a spade; it will pulverize the ground better; never work it in wet weather, as it will become hard and cloggy, and it may take the greater part of the season to get it into good condition again. After the plants have made sufficient growth they should be transplanted into the borders, where they are to remain. For this purpose choose a dull showery day, if possible, or if in dry weather, let it be done in the evening, and water immediately after planting. When the plants are established, they will require no other care than the tying up of the taller growing sorts, to stakes, to prevent the rain and wind, from beating them down and injuring the blooms.

ANEMONE FULGENS.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

SELECTED FLORAL NOVELTIES AND SPECIALTIES FOR 1889.

- 1 **Aralia Seeboldi**, new, beautiful plants for Lawn or Greenhouse with palm shaped leaves, highly ornamental..... per pkt. \$0 25
- 2 **Aster Comet, new Curl or Poodle**,..... " 0 50

A new and extremely beautiful class, 9 to 11 inches high, pyramids compactly trimmed with flowers, in form deviating from all hitherto existing Asters and equal rather to a Japanese Chrysanthemum. The plant well cultivated produces from 25 to 30 compact double flowers, from 2½ to 3½ inches in diameter, color rose red bordered with white.
- 3 **Aster Dwarf Victoria Dark Scarlet, Benary**, new, valuable for cutting and especially adapted for the formation of masses, which produce a strikingly beautiful effect, it is also of great utility for edgings and pot culture..... per pkt. 0 25
- 4 **Begonia Single Tuberos Rooted, International Prize**,..... " 0 50
- 5 " **new, Double mixed**, saved from the richest collection extant... " 0 50

Seed of unsurpassed quality, the result of cross fertilization of the newest hybrids, unequalled for steadiness, brilliancy of color, form and size.
- 6 **Caladium Bulbosum**, new, spotted, veined and blotched hybrids mixed... per pkt. 0 50
- 7 **Candytuft Empress**,..... " 0 10

If not superior to all Candytufts this variety is certainly one of the finest of them. Plant of very branching habit and when fully grown is covered with large tresses of pure white flowers.
- 8 **Canna, Crozys' new varieties**,..... per pkt. 0 10

Distinguished by the luxuriance and diversity of the color of their foliage, but above all by the unusual size and brilliant hue of their flowers.
- 9 **Capsicum Little Gem**, beautiful dwarf variety, producing a profusion of bright scarlet berries, the size of a red currant, very fine for table decoration... per pkt. 0 10
- 10 **Carnation, new, yellow self Germania, Benary**, is a rapid grower, of robust branching habit, height about 2 feet, its numerous flowers, the first of which measure 2 to 3 inches across, are very large and double, of rich canary yellow color, they remain fresh and in full bloom for a long time. Succeeds best planted out in a cold frame or in the open ground..... per pkt. 0 75
- 11 **Cyclamen Persicium Giganteum Sanguineum**,..... " 0 75

Flowers are of the deepest and richest shade of blood-red imaginable
- 12 **Dodecatheon Meadia, American Cowslip**,..... per pkt. 0 15

Beautiful light purple flowers.
- 13 " **Integrifolium**, rich crimson purple .. " 0 15

Much admired herbaceous perennials.
- 14 **Gloxinia, New French Tigred and Spotted Hybrids**,..... " 0 25

The seed has been saved from a selection of the finest and most beautiful spotted and tigred hybrids. See colored plate in my Store.
- 15 **Mimulus Brilliant, new large flowered dwarf**..... per pkt. 0 50

Vigorous growing variety bearing very large and finely formed flowers almost resembling gloxinias.
- 16 **Mimulus (Musk-Scented)**,..... per pkt. 0 50

Producing large yellow flowers, beautifully marked with crimson spots which emit a musk scent, very effective plant.
- 17 **Mina Lobata**,..... per pkt. 0 50

Charming half hardy Mexican climbing annual, its flowers singular as they are attractive; and when fully expanded are of a creamy white shade. They are copiously produced from the base to the summit of the plant which attains a height of from 18 to 24 feet. It requires the same treatment as other half-hardy annuals, but should be planted in a sheltered situation.
- 18 **Myosotis Alpestris Victoria**..... per pkt. 0 25

Plants attain a height of 5 to 7 inches, a circumference of 10 to 18 inches by a diameter of 8 to 10 inches, and when fully grown are perfectly covered with flowers, valuable for carpet bedding, edgings and masses and for growing in pots for market.

WILLIAM EVANS' ILLUSTRATED CATALOGUE

GENERAL LIST OF FLOWER SEEDS.

ANNUALS, BIENNIALS AND PERENNIALS.

In arranging this list of Flower Seeds, I have followed the method adopted by many of the European florists, of placing Annuals, Biennials and Perennials all together, arranged alphabetically and distinguished by abbreviations, explanations of which are given below.

EXPLANATIONS—ha. *hardy annual*; hha. *half hardy annual*; ta. *tender annual*; hb. *hardy biennial*; hhb. *half hardy biennial*; (requires protection in winter.) hp. *hardy perennial*; hhp. *half hardy perennial*; ghp. *green house plant*.

The letter C. preceding any of the abbreviations indicates climbing plants, and the letters O.F. ornamental foliage plants.

The figures after description, in the second column, indicate the average height in feet to which the plant attains under good cultivation.

FLOWER SEEDS.

		Hardness and Duration.	Height feet.	Price. \$ c.
115	ABRONIA Umbellata , pretty trailing plant, sweet-scented, rose-colored flowers....	hha	$\frac{1}{2}$	5
116	" Arenaria , waxy plant.....	"	$\frac{1}{2}$	10

HORTICULTURAL REQUISITES.

Fertilizers, Insecticides, Grafting Wax, &c.

An Insecticide and Fertilizer, destroys Potato Bugs, Cabbage Worms, Rose Bugs and all Lice, Worms, and Caterpillars upon Melon, Cucumber, Squash and Grape Vines, Fruit and Ornamental Trees, Shrubs and Flowering Plants. It has been used in this Province with great success and is not injurious to either man, beast or fowl, but is probably the most effective and economical article in use for the destruction of the various insects that prey upon cultivated

vegetation.

in 5 lb. package, 35cts.

10 lb. packages, 60 cts.

Special prices given for larger quantities.

Soluble Fir Tree Oil Insecticide, for parasites on plants and animals. Unquestionably answers every purpose as an Insecticide and satisfies the requirements of the horticulturists, being a mixture of hydro-carbon oils perfectly soluble in water. The application of the Insecticide on plants and trees should be done in the evening or very early in the morning, and in all operations the use of soft water is especially recommended.

DIRECTIONS.

To make a cleaning solution for washing or cleansing purposes—Half a pint of the oil to 10 gallons of water.

For green and Black Fly, Thrip, American Blight, Woolly Aphis, &c.—Half a pint of the Fir Tree Oil to 2 or 4 gallons of Water, or 2 or 3 table-spoonfuls to the pint.

For Red Spider and Caterpillar—Half a pint of the Fir Tree Oil to 2 gallons of water, or 3 tablespoonfuls to the pint.

For Mealy Bug, Brown and White Scale—Half a pint of the Fir Tree Oil to 4 or 6 quarts of water, or 3 or 4 tablespoonfuls to the pint.

For Mildew and Blight on Fruit and Foliage—Half a pint of the Fir Tree Oil to a gallon of water, or 2 tablespoonfuls to the pint.

For Ants, Grubs, Worms, Wood Lice, &c., in the soil—Half a pint of the Fir Tree Oil to 4 gallons of water.

Cahoon's Broad Cast Seed Sower.

It consists of a light sheet iron work, with a canvas bag or hopper surrounding it which will hold about half a bushel of seed. It is suspended by a strap from the operator's neck, and held in position by a strap round his waist. The grain falls through an opening that can be graduated as to the quantity sown per acre, and is discharged through a flanged mouth or spout. The seed is thrown from 9 to 30 feet on each side of the operator. The machine, at a common walking gait, sows from 4 to 8 acres an hour.—Price, \$6.50.

CAST IRON VASES.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

Jeffrey's Scotch Wrought Iron Double Mould-Board or Ridging Plough. Price with Markers, \$26.00. With Markers and Potato digging attachment complete, \$30.00.

WATSON'S SIDE HILL PLOUGH.

This plough is designed particularly for side hills where the furrows require to be all turned the same way. It is also used extensively on level ground as it allows the seeding and harrowing to be finished up to the last furrow ploughed each evening. The mould-board and share are hinged in such a way that they may be changed from one side to the other, making a right hand plough at will — Price \$18.00.

WATSON'S SUBSOIL PLOUGH.

Is intended to follow the furrow after an ordinary plough and stir and loosen the subsoil without bringing it to the surface.

PRICE—\$12.00

No. A.—Eagle Stubble. Furrows 3 to 4 inches deep 8 to 9 inches wide, one horse, plain, extra point, \$6.00

No. O. Eagle Stubble Furrows 3 to 5 inches deep 8 to 10 inches wide, heavy horse, extra point, plain \$7.00, with wheel and coulter, \$9.00.

These popular and well known ploughs are designed for various conditions of soil and cultivation. Being strongly made, they are admirably suited to rough and uneven surfaces.

A complete assortment of the best made Scotch Ploughs suitable for light and heavy land, of various sizes and prices. Cultivators, Horse Hoes, &c., always on hand. Will be pleased to quote prices on application.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

IRON HARROWS IN THREE OR FOUR SECTIONS.

Price \$15.00 to \$17.00 according to weight and number of teeth.

Howard Patent Steel Chain Harrows.

This is the most perfect Grass Harrow ever produced, it is not liable to get out of order, the points of the tripods being immovably fixed to wrought steel rods, and chilled all over. They are longer on one side than the other, and rounded off at the back. This Harrow is as efficient for arable land as the common chain or light Harrow while at the same time its superiority as a Grass Harrow is fully maintained. These Harrows will do as much in going over the field once as the ordinary Chain Harrow will do at three times, when used upon arable land the Harrow should be drawn the reverse way.

8 feet wide, suitable for two horses. Price, \$34.00.

IRON CULTIVATOR.

This Cultivator manufactured by Copp Bros., can be confidently recommended to the public as being in advance of any thing of the kind yet introduced. In working between narrow rows, the slides are so constructed that the bars will come close together. The teeth in front and rear are stationary, but the centre ones can be moved back and forward as desired. The boards shown with the cultivator are used for moulding up potatoes or other root crops, and are fastened to the frame in the same manner as teeth. Weeder knives can be furnished if required.

Price, \$14.00. With boards, \$16.00.

The "Fire-Fly" Wheel Garden Plough.

Makes the care of a vegetable garden a pleasure, and many families who could not find time to keep a garden, if attempting its cultivation with an ordinary hand hoe, can raise their own vegetables successfully with the "Fire-Fly". It takes the place of the horse and plough, or cultivator, requiring no wide headlands to turn on, and is invaluable during all the gardening season. The price is reduced to \$3.00.

THE "PLANET JR." AND "FIRE-FLY GARDEN DRILLS, WHEEL HOE, WHEEL CULTIVATORS, HORSE HOES AND GARDEN PLOUGH.

This is the most complete line of goods, and although they are light and easy running, they are practical all day tools; admirable in design, workmanship, material and finish; they are acknowledged to be the most perfect and reliable made. A complete descriptive catalogue illustrated with over 40 engravings shewing the tools at work will be mailed free on application.

The "Planet Jr." No. 2 Drill.

Holds $7\frac{1}{2}$ quarts. It will sow with equal ease and accuracy, a single paper of seed or a full hopper, covering evenly at an exact depth, and will roll down and mark the next row perfectly, all at a single passage, it has no cams, levers, brushes, cogs, springs or shakers. It is noiseless, automatic, self-cleaning and always reliable. It is remarkable for simplicity, strength and beauty and for ease and perfection of work in the field, and no one having use for such a tool can afford to buy any without such advantages, it is the latest improved and best.

Price, \$10.00 boxed.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

THE "PLANET, Jr." SINGLE WHEEL HOE, WHEEL CULTIVATOR and WHEEL PLOUGH COMBINED.

In improving this tool care has been taken to combine extreme lightness, strength, variety of tools and great adjustability. It has *one pair of long and one pair of short exchangeable hoes, a set of three reversible cultivator teeth, and a steel garden plough.* All the blades are of tempered and polished steel. The tool is pronounced by practical men as without an equal in beauty of design and finish, ease of operation, quality of work, and variety of adjustment, and in this improved form it is, unquestionably the lightest running, most convenient and practical Single Wheel Hoe known.

The form of the blades has proved superior to all other shapes, insuring a forward slanting cut next to the plant, and consequent close work *without danger.* and at the same time thorough cultivation of the soil. The cultivator teeth in combination with the hoes, enable the operator to perform almost every variety of work, either in the field or garden. All rows from *six to eighteen inches* apart can be perfectly hoed at *one passage.* The frame allows every desirable adjustment, is quickly raised or lowered to a regular depth and the wheel can be attached centrally or to either side of the machine giving the operator the important advantage of hoeing both sides of the row at one passage, when desired.

Price, \$6.00, boxed.

Hoeing Both Sides.

corn and all other crops. As a coverer it has no equal for corn, broom corn, potatoes, and in fact, any kind of covering, as it covers and rolls down the ground at one operation in ordinary field work or fits for setting out plants or for using the garden seed drill or wheel-hoe. The sale of this tool and the reputation gained by it over the whole of the United States and in many foreign countries, has probably never been surpassed by a similar implement in so short a time.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

The "Planet Jr." combined Drill, Wheel Hoe, Wheel Cultivator and Wheel Plough

As a Plow.

Hoeing Both Sides.

The "Planet Jr." Combined Drill, Cultivator and Plow.

Hoeing Between Rows.

As a Cultivator.

This is the most popular tool I have ever sold and it is unrivaled in beauty of design, perfection of finish, convenience and capacity for work. It is suitable for either the Farm or Garden and except the "Planet Jr." separate tool has no equal either as a drill, or as a wheel hoe, cultivator or plough. As a drill it is exactly similar and equal to the No. 2, except in size. It holds one quart. As a *Plough* it opens furrows, covers them, hills, ploughs to and from, &c. As a *Hoe* it works safely and closely to and from both sides of the row at once at the critical time when plants grow larger, working all rows from 8 to 16 inches wide at one passage. As a *cultivator*, it is admirably adapted to deep mellowing of the soil. The blades are of *tempered and polished steel*. It has a finely adjusted spring brass seed reservoir, an adjustable plough—two carrying and covering wheels; the new permanent *seed index*, the *cleaner and marker* all combining to make a perfect tool. It sows all garden seeds accurately at any desired thickness or depth, opening, dropping, covering, rolling down and marking down the next row all at one passage, in the most reliable and perfect manner. Each machine is sent out with the tools shown in the cut and by removing the roller and one bolt is ready to be used as a Wheel Hoe, Cultivator or Garden Plough.

Price, \$12 00, boxed.

The "Planet Jr." Double Wheel Hoe, Wheel Cultivator and Wheel Plough.

Will do the work of from six to ten men with the common hand hoe among market garden and root crops, nursery stock, etc., and is especially adapted to onion culture. It is light, firm, strong, quickly set and easily managed. Each one is sent out with all the tools shown in the cut; all the blades are of tempered and polished steel. The tool is light and graceful, made of the best material and highly finished, and nothing can exceed the perfection and variety of work it performs. The hoes cut from 6 to 16 inches wide, and can be used to throw to or from the row, working both sides of the row at once, far closer, faster and better than is possible with the most perfect tool made for hoeing only between rows. The 4 cultivator teeth work beautifully among larger plants, mellowing the soil thoroughly. The ploughs are useful in weeding crops, in opening furrows and covering and in hilling large plants. The wheels are adjustable in height and can be set 7 to 10 inches apart, or for working between crops as a Single Wheel Hoe at four inches apart.

Price, \$8.00, boxed.

The "Fire-Fly" Double Wheel Hoe for Rows and Hills.

Is still another new tool, this one bound to be the special favorite of onion-growers, for though we recommend the "Planet Jr." Double Wheel Hoe, Cultivator and Plough, as unexcelled for variety of tools and perfection of adjustment, this most simple hoe costs comparatively less, while answering perfectly the wants of those who need a hoe only. It is a beautiful piece of workmanship, its two finely polished hoes being adjustable for width and to throw slightly either towards or from the row, while the handles are adjustable to suit a boy or the tallest man. A special feature in addition is an arrangement of the frame by which the hoes as shown in the cut, are adapted to perfect hoeing of plants in hills with as little fatigue and almost as rapidly as when in drills. This is an admirable feature, and we have never offered anything so entirely practical and perfect.

Price, \$5 00, boxed.

Cultivating Two Rows.

Earthing Up

The "Planet Jr." Double Wheel Hoe, Cultivator and Plow.

Hoeing Between Rows.

Hoeing Both Sides.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

The "Fire-Fly" Single Wheel Hoe, Cultivator and Plough Combined.

This is a new claimant for public favor, and is sure to receive a large share of it, for it combines lightness and strength with the greatest adjustability while its highly polished and tempered steel tools make gardening comparatively a pleasure. The tools are all made after the most perfect models and are first, a pair of

admirable hoes which can be set to work to and from the row, and to any desired depth. Next, a set of three reversible cultivator teeth to be used together, or singly or in conjunction with the hoe. Third, a large and excellent garden plough. The handle is made of stiff iron, and the whole tool is light and strong, attractive in appearance and capable of standing hard usage for years, while the price is its final recommendation. \$4.50, boxed.

MATTHEW'S IMPROVED WHEEL HOE.

The Matthew's Improved Wheel Hoe is confidently offered to the public as the best made, best working and easiest adjusted Wheel Hoe ever produced.

It spreads from 6 to 14 inches and will cut all the ground covered, even when spread to its greatest extent. The depth of the cut may be accurately gauged by raising or lowering the wheel which is quickly done. *A boy can do as much work with it as six men with common hoes*

It is made to receive the Matthew's Improved Hand Cultivator Teeth, and it has this advantage over any other Wheel Hoe; that it can be used with the forward tooth in connection with the Hoes as shown in the cut, or it can be used plain, that is, without the forward tooth if desired.

PRICES.

ECLIPSE HORSE HOE.

The Eclipse Horse Hoe is an implement that no successful Farmer or Market Gardener can be without, for while it is invaluable as a Horse Hoe, it can also be used with its different attachments as a

Horse Hoe, Cultivator, Plough and Coverer, Combined.

The side hoes or plates are reversible, thus giving double wear and the standards have adjustments that allow more or less hilling and also regulate the depth as desired. By changing the hoes from one side to the other which is easily done, the earth can be thrown from the crops.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

Matthews' Garden Seed Drill.

PRICE, \$13.00 BOXED.

We know of no hand Garden Seed Drill for sowing vegetable seeds, &c., which has met with the popularity of the Matthews' Garden Seed Drill among leading seedsmen and market gardeners everywhere, and therefore heartily recommend it to our customers. It has been many years in use, and its largely increasing sale is the best evidence of its merit.

It is designed for use in field or garden. When in operation it opens the furrows, drops the seed accurately at the desired depth, covers it and lightly rolls the earth over it and at the same time marks the next row. It will sow *Beet, Carrot, Onion, Turnip, Parsnip, Sage, Spinach, Sorghum, Peas, Beans, Fodder-Corn, Broom-Corn, &c.*, with a certainty, regularity and rapidity, impossible for the most skilful hand to do.

A valuable feature in this Drill is its patent **INDICATOR** with names of different seeds on it for adjusting the drill to sow different kinds of seeds, which is done by simply turning the indicator until the name of the seed you want to sow comes to the top. No other drill is furnished with this ingenious device.

The drill is complete in all its arrangements, it is made of the best material throughout, and is constructed with such care and nicety of finish, that it will last many years, and do a vast amount of work without requiring any repairs.

MATTHEWS' IMPROVED DRILL and CULTIVATOR Combined.

PRICE, \$15.00 BOXED.

The Matthews' Drill and Cultivator Combined has been greatly changed and improved. It has a larger wheel with a wider flange to it, a new conductor and a new cover, so that as a drill it now possesses all the features of the Matthews' Garden Seed Drill of a smaller size. It has the same patent **Indicator** as that. The Cultivator attachment has also been greatly improved by providing it with a new set of teeth of an improved pattern

with **Steel Blades** of the best quality, so that as a cultivator it is now similar to the Matthews' Improved Hand Cultivator. Therefore as now constructed this machine cannot fail to prove very efficient for use, either as a drill or cultivator, and will be found to be adapted for any kind of soil.

We can furnish for the Matthews' Improved Drill and Cultivator, if desired, a pair of superior style

HOES WITH LONG STEEL BLADES,

for use in exchange with the cultivator teeth, which are easily and quickly adjusted, at \$2.00 per pair, complete.

Matthews' Improved Hand Cultivator.

PRICE, \$6.50 BOXED.

The Matthews' Hand Cultivator has been also changed and improved. It is now made with a larger wheel, and with a larger flange to it. It is also provided with a new set of teeth of an improved pattern having **Steel Blades** of the best quality, and as now constructed will, we think, prove greatly superior to what it was before, and be found to be perfectly adapted for use in any kind of soil.

It is thoroughly constructed throughout, very durable and easy to operate. A boy can do as much with it as six men with hoes. It spreads from 6 to 14 inches and will cut all the ground covered even when spread to its greatest extent. The depth of cultivating may be accurately gauged by raising or lowering the wheel, which is quickly done.

We can furnish for the Matthews' Improved Hand Cultivator, if desired, a pair of superior style.

HOES WITH LONG STEEL BLADES,

for use in exchange with cultivator, which are easily and quickly adjusted, at \$2.00 per pair. complete.

No. 7, " 18 " "	13 00

I take great pleasure in introducing to the Dairy Public the recent improvements made in the well known **Blanchard Churn**.

The special advantage claimed for "**The New Blanchard**" is an improved form for the body of the Churn. By making the top circular, as well as the bottom, all the cream *must be churned alike and at the same time*. This new form does not require that the cream should be scraped down from the sides of the cover while churning and *makes streaked butter impossible*. It is stronger and more durable than the old form. The body of the Churn is made with matched staves from the best Michigan pine about three quarters of an inch thick. All the lumber is thoroughly kiln dried. The new Dasher being more simple than the old, requires much less power to turn it.

It has been proved by accurate experiments the past year, that the New Blanchard will make *more butter* from the same amount of cream than the old form.

It also combines *all the advantages* of the former manufacture, which may be briefly stated as follows:

1. Perfect quality of all material used.
2. Excellence of Manufacture.
3. Simplicity of construction, having no cog wheels or gearings.
4. Durability.
5. Ease of operation.
6. The action of the Dasher is such as to cause agitation of the cream by creating currents, and not by beating or friction of the cream, which injures the grain of the butter.
7. The reverse motion of the Dasher gives a pressure to the butter, by which the butter-milk may be all worked out and the salt worked in, without removing the Dasher.
8. Facility of removing the Dasher and getting at the butter.
9. Ease of cleaning, the form of construction making the inside without any inaccessible or visible angles or corners.

THE BLANCHARD BUTTER-WORKER,

The **BLANCHARD BUTTER-WORKER** is constructed on an entirely new principle, which does not *work* the butter at all, but which *takes out all the butter-milk*, on the principle of direct and powerful pressure, and which *does not and cannot* injure the grain of the butter. It is a pressure made by cams, operated by a simple lever giving the most powerful pressure known in mechanics.

Such is the construction of the machine that the pressure is obtained with very little effort, and it is so simple as to be easily understood and operated. It is a cheap machine, costing but a small amount at first, and so simple and durable in its form that it will last a long time. Should any part break by accident, it can easily be repaired by any ordinary machinist.

The same movements which work out the butter-milk, will *quickly, easily and perfectly* work in the salt. The entire working and salting can be done without touching the hands to the butter. No second working is required.

The Butter-worker is not intended to work a large amount at one time; but the smaller size (No. 2) is guaranteed to work and salt *perfectly* five pounds in *two minutes*, and the next larger size (No. 3) ten pounds, as perfectly, in the same time. A large quantity can be worked *as quickly, more easily and more evenly* in lots of ten pounds each, than all at once by any other method. It is guaranteed that the butter will be left in *better condition, every way*, than when worked by the most skilled person by hand, or by any other machine.

Prices—No. 2, \$10.00.—No. 3, \$12.00.

Circular giving further details and directions for use sent on application.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

CYLINDER CHURN.

This is a favorite style of Churn in use for many years. Five sizes are made, to hold from three to fifteen gallons.

No. 1.....	\$2 50
No. 2.....	\$3 00
No. 3.....	3 50
No. 4.....	5 00
No. 5.....	5 50

ROAD SCRAPER.

No. 2. Road Scraper, all cast iron with wrought bail, wooden handles.

PRICE\$7.50.

SOLID STEEL SCRAPER.

The perfect scraper made of a single sheet of steel PRESSED into the best and most practical shape for working. It is made with one continuous curve from the centre up the side and back, giving it greater strength and capacity than can be obtained in any other way.

It is without JOINT or SEAM, and there is not a sharp corner, angle, bolt, brace or stayrod about it. No. 1, with runners, \$13.00. No. 2 without runners, \$12.00.

AGRICULTURAL FURNACES.

1 Barrel or 30 gallons without cover.....	\$15 00	with cover	\$17.50
1 " 45 gallons " "	20.00	"	23.00
2 " 60 gallons " "	25.00	"	28.00

This furnace is of modern design and construction; the flues are so arranged that the heat thoroughly encircles the boiler. It will boil quicker and with less fuel than any other furnace known.

THE AQUAPULT,

A PORTABLE BRASS PUMP.

This pump will easily throw five gallons of water per minute forty feet high, with power of one hand applied. The operator stands firmly on both feet, in a natural easy position.

It is invaluable for washing windows, carriages, watering gardens, throwing liquids on roses, trees, plants, pumping water from boats, cellars, &c, also for extinguishing fires, and wetting roofs near fires.

In hundreds of cases large conflagrations might have been avoided by the use of this simple apparatus.

It is compact and weighs but five pounds. Price, with three feet of hose and discharge pipe, two sizes, \$8.00 and \$9.00.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

Garden Wheelbarrows.

"AMES," BEST QUALITY.

Painted, Striped and Varnished.

BOYS' BARROWS.

No 1, Small.....	\$5.00
No. 2, Medium.....	5.25
No. 3, Large.....	5.75

FULL SIZE 8 SPOKE BARROWS.

No 4, Medium.....	\$6.25
No. 5, Medium.....	7.00
No. 6, Large.....	8.00
No. 7, Extra large.....	9.50

JEFFREY'S GARDEN WHEELBARROW, - - - - \$5.00

This is a strong well made Barrow and suitable for all purposes.

WILKINSON'S GARDEN WHEELBARROW, - - - - \$4.50

Similar to the Jeffrey but not quite so heavy.

TURNIP SEED DRILL, FOR ONE HORSE.

This improved Turnip Seed Drill is giving perfect satisfaction. The rollers are made of cast iron and are hollowed to fit the rows. They slide along the axles and will adjust themselves to any inequalities in the width of rows. The depth of the sowing is regulated by the hind rollers. The Seed Boxes are concealed from the weather, and are opened by the friction wheels running on the front rollers. By bearing on the handles sufficiently to raise the front rollers, the sowing ceases, which is useful at the end of rows. The quantity to be sown is gauged by a band, with holes of various sizes perforated in it, which fits securely around each of the seed holes — **Price, \$16.00.**

THE PHILADELPHIA LAWN MOWERS.

Nearly all the machines used in mowing lawns are much heavier than is necessary, and more labor is expended in mowing than should be. To overcome this objection, these machines have been introduced. 12 inch cut with 6½ inch driving wheels. 14, 16 and 18 inch with 7 inch driving wheels; noiseless ratchets, swing stationary knife, self sharpening knives; lighter stronger and more durable than heretofore; the gearing is effectually concealed and cannot clog, all being made of the best material.

The 12 inch machine weighs 24 lbs. and is intended for small lawns for ladies and boys. \$7.00.

The 14 inch machine weighs 37 lbs. and is intended for lawns from ½ to 1 acre, easily worked by a youth. \$8.00.

The 16 inch machine weighs 41 lbs. and is intended for lawns from 1 to 1½ acre. Men's size. \$9.00.

The 18 inch machine weighs 46 lbs. and is intended for lawns from 1½ to 3 acre. \$10.00.

We warrant the above mowers to run easier in grass not over five inches high than any other cheap Lawn Mower.

Garden Rollers in two Sections — \$16 and \$20

BENTALL'S PATENT ROOT PULPERS.

Awarded First Prizes at

Toronto, Montreal and St. John.

Bentall's Root Pulper No. 2.....\$34 00

“ “ “ No. 1 (extra heavy) for
power 42 00

It mashes roots to a pulp, for the purpose of mixing
with cut feed.

Several of the leading stock breeders of Canada are
using this machine and pronounce it superior to any
other for the purpose.

B. BELL & SON'S

ROOT CUTTERS AND PULPERS.

These Root Cutters and Pulpers are giving satisfac-
tion. They are made either single or double.

The construction of the feed box is so that they cut
to the last without any feeding with the hand. They have
a grated feed box and all dirt drops through, away from
the cut roots.

They are much cheaper than other cutters and will
cut easily and fast.

Prices, \$19 and \$20.

Just what is wanted.

A first class article.

Gardiner's Double-Action Root Cutter.

First Prizes at Toronto and Montreal Exhibitions.

Gardiner's Double Action Root-Cutter Improved.....\$34.00

IMPROVEMENTS—The cylinder has been enlarged, making it
less liable to choke with turnips. The hopper ends have been
made on a curve and the slicing knives corrugated to catch and
prevent the turnips from rolling.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

POWER STRAW CUTTERS.

The Highest and only Award at the Centennial Exhibition.

WOODWARD GRANT & CO

The Paris Straw Cutters have been before the public for a number of years and are now so well known that it is useless to say anything in their favor. For ten successive Provincial Exhibitions they have been awarded the First Premium. They are made in four different sizes, and at different prices and are indispensable for those who make a business of stock raising.

HAND STRAW CUTTERS

The International Model over all competitors.

Awarded First Prize at Toronto Industrial Exhibition, 1879, 80, 81 and 82

Hundreds of these machines have been sold during the past seasons and have given entire satisfaction. They are particularly suited to those having a small farm or for stable use. Those having a horse or a cow will find it an economical implement.

Price, \$27.00.

Maxwell's New Straw Cutters with Patent Change Stop and Reverse Feed Motions.

2	7	5 "	1 3/8 "	11 50

PATENT LEVER CORN CUTTERS.

Strong, simple and easily worked, as the parts need they can be tightened up and made as good as new.

This machine will cut Corn Stalks and Straw as well as Hay, perfectly.

PRICE, No. 1, \$8.00 No. 2, \$9.00.

WILLIAM EVANS' ILLUSTRATED CATALOGUE.

NEW WASHING MACHINE

(PAT. MARCH 17th 1887)

BY D. COUTU.

This Machine is at once strong, elegant and durable ; it is noiseless and works with facility ; the washing is perfect provided the linen has been previously soaked in water for about ten hours.

This machine is made at

THE INSTITUTION FOR DEAF-MUTES,

(NEAR MONTREAL.)

Price, \$10.00.

A

KREAMER'S Improved HEN'S NEST.

PAT, APRIL 11th 1885.

B

The cut **A** represents the complete nest with door open. The cut **B** represents a series of nests. This nest lately invented, is in the form of an ordinary hen's nest, in the bottom of which is an artificial nest-egg. In the centre of the Nest is an opening ; the egg as soon as laid falls into a drawer provided with a cushion pad, and rolls slowly inside. In this way several hens may lay one after the other in the same Nest, without the eggs being exposed to be broken.

PRICE—Single Nest, \$0.75—Series of 6 Nests, \$4.00—Series of 12 Nests, \$7.50.

RUMSEY'S

Improved Iron Corn Sheller.

PRICE - - - \$10.00.

This is made entirely of iron and will shell about one hundred bushels per day. The seed is perfectly separated from the cob in delivery by the action of the machine. It is probably the only iron corn sheller in use.

The National Farmers' and Family Cider and Wine Mills

are both constructed on new principles avoiding the defects existing in all other Mills for the purpose.

The peculiar construction and arrangement of the rollers are such that THE BEST QUALITIES OF BOTH CRUSHING AND GRATING MILLS ARE COMBINED, and this can be easily understood on examination of the rollers in action.

The grinding arrangement is very simple, consisting of two rollers arranged to work together in such a manner that the CELLS OF THE FRUIT ARE BROKEN, A FINE POMACE PRODUCED and from this pomace under the pressure of the screw A LARGE PERCENTAGE OF JUICE IS OBTAINED, making more cider from a given quantity of apples, that can be made with any other Mill now in use.

The saving of cider by the use of these Mills will soon pay the cost. The arrangement is such that the roller can be set for either coarse or fine work, and they are THE BEST MILLS in use, FOR CRUSHING GRAPES, BERRIES AND OTHER FRUIT BEFORE PRESSING.

They are contained within a strong compact frame, and have two curbs requiring no handling of the pomace and crushed fruit, and avoiding the necessity of ceasing the work of grinding while the pressing is being performed, as in the case of other Mills of this class having but one curb.

The work is thoroughly performed, and more effectively than can be done by any Mills of the same class in the market. The arrangement of the two curbs enabling BOTH GRINDING AND PRESSING to be done AT THE SAME TIME, greatly facilitates the work, increases the capacity of the Mills, and allows more time for the juice to drain from the contents of the curb.

THE FARMER'S MILL is of large size, intended for those who make cider in quantities. Its capacity is from six to eight barrels per day. The Mill is furnished with a pulley for the convenience of those having light power,

THE FAMILY MILL, as its name indicates, is specially adapted for family use; is light, convenient, and easily operated, same in principle and operation as the Farmers', only of smaller size and is sold at a price that justifies its purchase by any one wishing to make wine or cider.

Price of the Family Cider Mill, \$25.00. Price of the Farmer's Cider Mill, \$45.00.

LARD, CIDER and WINE PRESS.

The Lard, Cider and Wine Press is made in six sizes, light and portable, yet strong and well adapted for family use.

DIRECTIONS FOR FEEDING.

FOR CATTLE and MILCH COWS.—Give every time they are fed, according to the size of the animal, from one to four double handfuls mixed with other feed, and a great improvement is noticed in their condition in a very short time, the MILCH COWS yielding a large increase of rich milk.

FOR HORSES—At each feed a double handful mixed with the other food. It keeps the bowels regular and makes the coat slick and glossy.

FOR SHEEP and HOGS—From one to two double handfuls whenever fed, and they lay on flesh rapidly.

FOR POULTRY—About one-half teacupful daily to each fowl, sprinkled among the other feed.

EXCELSIOR LAWN MOWER.

SIDE-WHEEL MOWERS.

10 Inch Cut	\$13.00	16 Inch Cut	\$19.00
12 " "	15.00	18 " "	21.00
14 " "	17.00	20 " "	23.00

ROLLER MOWERS.

10 Inch Cut	\$13.00	16 Inch Cut	\$19.00
12 " "	15.00	18 " "	21.00
14 " "	17.00	20 " "	23.00

I continue to offer to the public the **EXCELSIOR LAWN MOWER** and claim for them the following general advantages over all other Mowers. They **Run Lighter, Cut Higher Grass, Need Less Repairs** and the adjustments are **More Simple**.

The **NEW SIDE-WHEEL MOWER** possesses many **important advantages** over any other Side-Wheel Mower. It has patent **Self-Cleaning Gears** which cannot **Clog**. It is **Noiseless in its Operation**. It has an **Improved Ratchet without Springs** to get out of order. Its adjustments are more **simple**, and it is the **Lightest and Best Side-Wheel Mower in the Market**.

The **EXCELSIOR ROLLER MOWER** [shown above] is well known to the public. It is **LIGHTER IN DRAFT** than any other of this pattern. **IT CUTS THE BORDERS, ROLLS THE GROUND**, and the gears are perfectly covered. It does the most **PERFECT WORK**.

NEW EXCELSIOR HORSE LAWN MOWERS.

—:O:O:—

I invite special attention to the **Excelsior Horse Lawn Mower**. Its **Sectional Castor Wheels** do not roll down the standing grass nor leave marks on the lawn. Its **Side-Draft Attachment** (which is furnished with the three larger sized Mowers) allows the horse to **walk ONLY** on the cut grass. I guarantee this to be the **Best Horse Lawn Mower Manufactured**, and to do **Perfect Work**.
